Test Three.

I am going to give you the instructions for this test. I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1

You will hear two people talking about when they became vegetarians.

[pause]

tone

Woman: It's been two years now since I totally quit eating meat.

Man: Me too. I just wanted to have a more sustainable lifestyle, and meat production's just not good for the planet. I thought I might miss certain vitamins, so I took the time to really educate myself about my diet.

Woman: Oh, that sounds like a good idea. Not trying to do too much at once was beneficial for me. Like not eating steak initially, and bit by bit exchanging chicken or lamb for other things I like – you know, beans and vegetables.

Man: I did pretty much the same thing and was amazed how varied non-meat dishes can be in fact. Going vegetarian wasn't so hard.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2

You hear a man talking on the radio about writing his first published novel.

[pause]

tone

Man: My first published novel was only short, but it was a real learning curve. I discovered some painful truths, like inspiration doesn't hit every day, and there were times I was just staring at the blank page in a panic. I'd set myself the target of completing it within six months, which I knew was ambitious. I don't think I fully understood just what level of commitment it'd require to achieve that. Sure, my previous experience of writing told me it wouldn't all come out right first time, so it was no great surprise having to rewrite many pages again. But even so... Anyway, I did it, and it got my name out there.

[pause]

tone

[The recording is repeated.]

[pause]

Test 3 answer key

Question 3

You hear a housing advisor talking about choosing flatmates.

[pause]

tone

Woman: When it comes to choosing flatmates, think about what you want first. Do you hope to become good friends, or are you happy to just have the occasional meal together? It can be a good idea for everyone who's going to live in the flat to meet first and get to know each other – then you'll know what to expect when you move in. Above all, if you're someone who likes to go to bed early and get up late, then you're not going to get with someone who cooks dinner at midnight or cleans the flat at dawn – so establish those things before you agree to move in together!

[pause]

tone

[The recording is repeated.]

[pause]

Question 4

You hear a radio presenter talking about butterflies.

[pause]

tone

Man: It's been a bad year for butterflies, says a butterfly conservation charity which runs a butterfly count that people can do in their own gardens each summer. This has been the worst year ever since the count started. People who took part only spotted around ten butterflies during the fifteen-minute survey, compared to the previous year's sixteen or so. A wet winter followed by a sunny spring is thought to have been responsible for so few peacock and tortoiseshell butterflies being spotted in their natural environment. Many species could well have appeared earlier than usual and completed their adult life cycle before the count began, while others began hibernating sooner.

[pause]

tone

[The recording is repeated.]

[pause]

Question 5 *You hear a man talking about a local shop.*

[pause]

tone

Man: I've lived in this part of London for a few years now and for pretty much all of that time I've bought my meat from Brian, my local butcher. His store isn't particularly fancy, and you won't find expensive wall fridges displaying imported sausages and the like, but his meat's outstanding. He's a friendly guy and his shop's not far from my home. Lately I've noticed that Brian's store seems to be busier than ever. Whereas previously there might've been one or two other customers when I visited, I'm now faced with a queue that might be five people deep – and that's despite the fact that a cut-price supermarket's opened just down the road.

[pause]

tone

[The recording is repeated.]

[pause]

Question 6 *You hear a student talking to a careers advisor.*

[pause]

tone

Man: So Kerrie, how can I help you today?

Girl: Well, basically I'm eighteen years old and I'm currently studying nursing, but I feel like the career just isn't for me somehow. I've always wanted to be part of the air cabin crew world, but I'd just like to find out a bit more about what it's really like as a job. The other thing on my mind is that my parents were so proud to think of me doing nursing. I mean, it was my choice and it's not that they'll be angry or anything. But for my own peace of mind, I'm looking for some arguments for why a flight attendant's also a worthwhile career.

[pause]

tone

[The recording is repeated.]

[pause]

Test 3 answer key

Question 7

You hear two students talking about a science lecture they've just been to.

[pause]

tone

Boy: What did you think of this morning's science lecture? There was certainly plenty to think about, wasn't there? And it went at quite a fast pace – the lecturer really packed a lot in.

Girl: Well, I'd actually wondered beforehand whether it'd be worth attending. But I did manage to follow it all. And a few of the points that the lecturer went over really helped me with stuff that had puzzled me a bit.

Boy: Well, I think I lost concentration a little at times – it did go on a bit. But yeah... I still felt I'd learnt stuff that had been tricky to take in before.

Girl: Right.

[pause]

tone

[The recording is repeated.]

[pause]

Question 8

You hear a film-maker talking about her latest film.

[pause]

tone

Woman: As you may have read in the press, my latest film's going to be released soon – and I'm actually looking forward to seeing the public's reaction! I had many images in my head for how I wanted the film to be, and for once everything worked out ... which doesn't always happen. But I'm hoping it'll be seen as something quite different from what I've done before and be remembered as a new departure in my work. That was certainly my intention. I'm not entirely sure how it compares with my previous films, but no doubt the reviewers will tell me! Let's wait and see!

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

PART 2

You will hear a woman called Emma talking about upcycling furniture to make it look new again. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

I'm Emma and I have a small business doing something called 'upcycling'.

Upcycling's brilliant – taking something old – in this case, second-hand furniture – and improving its appearance, making it useable again by repairing broken bits, painting it, and so on. For me, the fact that it's **environmentally friendly** is what's so great about it. It can be cost-effective too, especially if you already have an item of furniture to do up.

You don't need any particular skills to get going! But you do need to be aware of things like wiping dust away so it doesn't get stuck on the furniture and ruin the finish ... that's why **preparation is key**. If you're doing up old furniture you've already got, there's no huge investment required – you'll already have most of the stuff you need to do the job at home.

However, if you do want to purchase new tools to help you do your upcycling, put your money into decent brushes for painting. You could use rollers as well, though you won't be able to do finer details easily with those. Don't bother with special polishing cloths, though – **old socks** are brilliant when it comes to finishing your furniture!

You might have a piece of furniture that you think just looks old or old-fashioned and not much use. But you can give things a new purpose and this is where you have to be imaginative. An old stepladder might be great for displaying plants, or an old chair with worn fabric can be recovered with something more stylish. The possibilities are endless.

If, like me, you decide to start buying, doing up and selling items, then don't splash your cash on vintage pieces you see in shops. You'll be able to find something not too different at, say, street markets – that's where I head for pieces of furniture. Prices are lower, especially if the item's in a poor condition. You can go to auctions, too, or even check websites – though it's better to see what you're buying in person, I think.

When it comes to appearance, some people say it's important to match the style of the upcycling to how the piece was when it was first produced, and I tend to think the same. However, there are no rules and your own personal taste is what matters as far as furniture for your own home is concerned. If you want to use contemporary patterns and textiles on old furniture, which would probably have been more subtle originally, then go for it!

When it comes to colour, you can take inspiration from the room the furniture's going to sit in. Consider your options carefully. Something bright or bold might clash if the other colours are more natural or earthy – likes greens or browns. I tend to come back to delicate colours again and again – anything from pinks to greys.

I like lots of period furniture – furniture that was made during a particular era. Each piece from a specific period tends to be similar in style. Some of the most popular ones are Art Deco and mid-century – by which I mean the twentieth century. Personally I go for Arts and Crafts – that's what the period's called – and I find stuff from then particularly elegant.

Test 3 answer key

Of course, you can change modern furniture or decorative items, too. Maybe it's something you bought that doesn't fit with your décor the way you thought it would and you never got round to returning it. Don't waste it! You might upcycle a picture frame. I actually did up a mirror – it was in really bad condition, but it's ended up being my biggest achievement.

You don't have to stop at furniture for the home, either. If you have a garden, you also need somewhere to sit – benches, chairs and tables and so on. I don't know whether your boss would be happy about you upcycling the office furniture, though, so you may want to draw the line at that!

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

PART 3

You will hear five short extracts in which people are talking about when they learned to cook. For questions 19 to 23, choose from the list (A–H) what each speaker says they enjoyed about learning to cook. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

I wouldn't say that learning to cook has inspired me or made me think about quitting my job and becoming a chef. Far from it. In fact, I find having to cook every day for family members a bit of a chore. But there was one benefit to doing a basic skills course and that was realising how much of what kinds of food you need to put on your plate and how big portion sizes should be. I'm definitely more energetic now and I hardly ever get ill. I tend to make ordinary food that I can prepare quickly rather than trying out all kinds of weird and wonderful recipes.

[pause]

Speaker 2

I taught myself to cook, from TV programmes and recipe books. I didn't always choose the easiest things at first and got in a mess sometimes! Why do so many recipes involve using such strange ingredients that you can't get in the local supermarket? Anyway, I realised that while I was struggling to get my head round new techniques and make sure I didn't burn one thing while preparing another, I hadn't thought about things that were bothering me at work or whatever in the meantime. That was great. I'm still not a natural and I'm not sure my flatmate always enjoys what I make – but she never complains!

[pause]

Speaker 3

I love food, who doesn't? But making it yourself is a whole different ball game to eating in a restaurant or friend's house. I learned to cook at quite a young age when I developed an intolerance to this stuff called gluten that you find in bread and lots of other foods. I had to find alternatives and suddenly this whole new world of eating opened up for me and I could really enjoy what was on my plate, knowing what was in it. I don't come from a family of great cooks and prefer plain food to international cuisine but I can at least feed myself and other people now!

[pause]

Speaker 4

When I first put a plate of food in front of my parents, they were pretty awestruck! It was by no means the best dish in the world, but it was edible and they said all the right things while they ate it. Maybe they were just being kind then, but as I improved, I could tell that their comments were genuine, and that spurred me on to be more and more adventurous. Well, I say adventurous – but only in terms of cooking techniques. I use everyday ingredients and like simple dishes using vegetables from my own area. I only cook when I have to, I wouldn't do it professionally, but at least it tastes OK!

[pause]

Test 3 answer key

Speaker 5

I decided to learn to cook after having this incredible meal abroad. I thought it must be great to make delicious food and get all these compliments from customers. So, after work each day, I went home and got cooking. At first, I just grabbed stuff from the fridge and had a go. Those dishes weren't the best because I had no real idea which foods went well together, or what anyone else would actually like. Anyway, the thought of that meal I'd had on holiday came back to me, and I wanted to see if I could do it myself. It was a fairly decent attempt and I was delighted with myself!

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

PART 4

You will hear an interview with a marine biologist called Anna Masham, who does a lot of work with sharks. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

Interviewer: Today I'm talking to marine biologist Anna Masham. I know you went to university when you were quite young, Anna. Did your parents encourage you to do that course?

Anna: They didn't try to put me off, but they had some reservations. I mean they never questioned that I'd probably love it, and they knew I was sensible, even at that age, and wouldn't take unnecessary risks. The issue for them was what I'd actually do at the end of my studies. It can be quite a difficult profession to break into and they didn't want me to be disappointed.

Interviewer: And straight after university, you worked on a tourist boat, didn't you?

Anna: That's right, just for one summer, as a guide on dolphin watching tours. It was an amazingly fun job, but nothing like being a marine biologist, of course. What I did realise while I was doing it was how much I wanted to pursue the career path I'd embarked upon. Though after all that time as a student, I didn't actually mind taking a bit of a break from the academic side of things, at least for a short while.

Interviewer: Then you got a job working with sharks. Tell us about your first encounter with one.

Anna: Well, I joined a team investigating the movements of sharks in and out of a protected zone. I was in the water with two scientists so they could teach me how to attach a tracking device to a shark. I'd been shown how to do it beforehand, but on a model, not a real one. They picked a huge male, and I was just desperate to do it right, so they'd see I was up to the job. Luckily everything went just fine!

Interviewer: What is it about sharks that you like so much?

Anna: They're frequently portrayed as mindless eating machines, but they have a certain, adorable stupidity that's too often entirely overlooked. Once you've seen two whale sharks swim into each other, or a blue shark circling you seeming a bit confused, or ten juvenile blacktips essentially playing the same kinds of games that human kids do in playgrounds – that's when you begin to love them for the wonderful fools they truly are.

Interviewer: What would you say has helped you most in your career so far?

Anna: I rarely get anxious about the future – my fascination and passion drive me so completely that sometimes I forget about potential difficulties. I'm also extremely stubborn. When I was a student I was told by one of my lecturers that the field would be too challenging for me. Part of my motivation has been the need to prove him wrong, so in some ways I'm grateful for his pessimism!

Interviewer: So what's next? I know you're very interested in protecting sharks ...

Anna: Yeah, I wish more people could experience swimming with these incredible animals, in the ocean. That's what I'm going to get involved in promoting. I've talked to so many people who, after just one encounter, start to ask about conservation and what they can do. It's hard to care about an animal you've never actually observed in the wild. There's a view that people should be forced to see the harm we've done to them – to feel ashamed of it – but that can have a negative effect, make people turn away. Campaigns to educate the public need to show there's hope for the future – if we take action now.

Test 3 answer key

Interviewer: And finally, Anna, what advice do you have for young marine biologists who are just starting out?

Anna: Talk to others, reach out to peers, scientists you admire, or companies you're interested in working for – no one will hire you if they don't know you exist. It's also important to be flexible. That's the main thing, I'd say. I love sharks more than anything but have ended up doing a lot of work with turtles, whales, seagrass, coral, manta rays... I've loved every second – never say no to an opportunity just because it doesn't revolve around your chosen field. Treat everything as a learning opportunity.

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I shall remind you when there is one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That is the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
