Audioscript

Test One.

I am going to give you the instructions for this test. I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1

You hear two students discussing some research into the behaviour of fish.

[pause]

tone

Boy: What are you reading, Josie?

Girl: An article about some new research. Apparently, some scientists decided to try and find out if fish could recognise different people's faces.

Boy: That's a funny topic to choose! Surely fish can't do that!

Girl: Oh, I dunno. I've always felt my goldfish can tell the difference between me and my brother.

Boy: That sounds unlikely. But what did the researchers actually discover?

Girl: Well, they claim to have found that the fish learnt to identify specific faces of the people who fed them. But don't ask me how they went about proving that – it sounded very complicated. And, I'm not entirely sure whether it's a serious bit of work or not.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2

You hear a boy telling his friend about an important football match he will play in soon.

[pause]

tone

Girl: It's your big match next week, isn't it?

Boy: Yeah – and I'm not looking forward to it. The other team's really strong. And to be honest, I hate playing in midfield.

Girl: But you did well in your last match.

Boy: I'm better as a striker, though. I might see if the coach would swap me.

Girl: It's too close to the match now. You could always ask him to fit in more training this week.

Boy: I don't think there's any choice, is there? I'll do that. I was going to suggest that James in our class could play – he's brilliant – he doesn't think he can make it though.

[pause]

tone

[The recording is repeated.]

[pause]

Test 1 answer key

Question 3

You hear two friends talking about a rock band.

[pause]

tone

Boy: Have you heard about that band, The Comets? Apparently they've split up.

Girl: People are saying online that they all disagree about what musical direction to take – some want to do heavy rock, others prefer pop stuff.

Boy: They're just rumours and gossip, if you ask me. There are some strong personalities in the band, though. They were bound to fall out eventually.

Girl: Well, that's what seems to happen with most bands, isn't it?

Boy: Just overdoing it might be a factor, you know. They probably burnt themselves out.

Girl: I suppose that is a reason why many bands split. Look at the facts, though – they've only done two concerts in the last year.

[pause]

tone

[The recording is repeated.]

[pause]

Question 4

You hear a teacher talking to his class after a discussion on space exploration.

[pause]

tone

Man: During the class discussion we had today many of you expressed the opinion that space exploration is a huge waste of money. You put forward the argument that we can't afford it when we have so many problems on Earth that need tackling first. That makes sense on the face of it and you certainly had a good discussion. But of course one of the problems we're likely to have one day is lack of resources – particularly minerals. On other planets in the solar system we might be able to locate and extract such minerals. Therefore all the money spent now may well turn out to be worthwhile in the long run.

[pause]

tone

[The recording is repeated.]

[pause]

Question 5

You hear two friends talking about a riverboat trip they've been on.

[pause]

tone

Girl: Did you enjoy the boat trip?

Boy: Yeah. It was great to see the city from the river, wasn't it?

Girl: I've done that trip once before and the buildings are pretty amazing – no more than when you're looking at them from the bank, though really. What I didn't get last time was an explanation of what I was looking at – I appreciated that.

Boy: Normally I'm not a fan of commentaries over loud speakers but it added something to the trip.

Girl: And then having music played as we travelled down the river at night made it really cool.

Boy: It was a fantastic evening anyway, so that didn't really make any difference to me.

[pause]

tone

[The recording is repeated.]

[pause]

Question 6

You hear a boy talking about working as a volunteer in a nature reserve.

[pause]

tone

Boy: Last summer I worked as a volunteer in a nature reserve. I'd often been there when I was younger and was keen to let everyone see what I'd learnt about the place. I didn't know what to expect, but obviously I never thought we'd be given a whole list of easy options. And I was right. I was given some gardening jobs – not really my thing as I've always thought of gardening as pretty dull and for old people. It turned out, though, that I actually managed to make a difference to the place and it was cool just standing back and having a look at what I'd done.

[pause]

tone

[The recording is repeated.]

[pause]

Test 1 answer key

Question 7 You hear a radio news item about National Ice Cream Month in the USA.

[pause]

tone

Woman: Ice cream is the USA's favourite dessert. So much so that in 1984 the country's then president made July 'National Ice Cream Month', and the third Sunday of that month 'National Ice Cream Day'. All Americans are supposed to celebrate by eating lots of ice cream. If they're concerned about the calories involved, there are plenty of low-calorie ice creams available. And this year a leading US ice cream manufacturer is marking the month by adding a new flavour to its repertoire each week. People can also celebrate the occasion by purchasing a set of five stamps produced by the post office, each with a picture of a different ice cream on it.

[pause]

tone

[The recording is repeated.]

[pause]

Question 8 You hear a girl talking about a science project she did at school.

[pause]

tone

Girl: Last term our science teacher put us into groups to do a project – our group had to look at how people learn and remember things. We spent ages working out ways to test different learning styles. Students in other groups were keen to find out what sort of learners they were – then I tested myself. My results showed I learnt best by listening to information first without trying to write anything down. I've never been any good at languages – so I tried that out in my Spanish classes – and it did seem to work! Although it did take time to get used to learning things in a new way.

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

[pause]

PART 2

You will hear a man called Ben Gardener talking about his job, making large models from plastic building blocks. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

Hi! I'm Ben Gardener, here to tell you about my unusual job! You may have played with plastic building bricks when you were younger? Well, I now use bricks just like those to make models for a special theme park. People go there to see the models, as well as to go on the rides.

How did I get this job? Well, I'd already had several jobs in theme parks. I'd worked in plumbing, repairing things like the fountains and water slides there. And I'd also had a job as an engineer, where I worked in animation – getting large models to move and look lifelike.

To get work like mine, it's also important to have qualifications in certain subjects, like design to help with the model building itself, and art, for creative ideas to make more interesting new rides. My degree in physics has helped me understand important things like speed on the rides and the forces involved.

When I applied to work at the theme park, I attended a selection day. I had to demonstrate I could make models from plastic bricks. They're obviously square or rectangular. I had no problem building trucks, robots – objects like that, even star shapes weren't too tricky. One task, though, was to produce something round – a head, or the moon – something like that. It was tough!

Later we had to make a more complex model that we'd planned beforehand. We'd been shown things that had been done before – a house with furniture, and one I thought was great – a racing car complete with driver. I decided on a crocodile, which they must have liked because it got me the job! I was more impressed by someone who'd built a giraffe. Spectacular!

Now I'm actually doing the job, I've found the design stage is very important. I'm always at my desk, which is covered with pieces of graph paper, for making plans of models, and loads of pencils, all different thicknesses. And then my drawings – nothing's more important than those, cos obviously they form the basis of the design. I also have several cameras to take photos I need for background information.

The plastic bricks I use to make my models all clip together by themselves, but I use glue as well, to actually stick the bricks into place. They're permanently outside so they're designed not to be affected by the weather. But they do get a lot of handling by visitors, so it's really vital to do this if the models are going to stay in one piece!

Recently I've been asked to use the experience I'd gained working at other theme parks to design models which move. I work with the team that's doing the installation of a new model. That means I sort out things like the electrical controls, how to use lighting effectively for atmosphere, and I create the sounds the model will make – that's the most thrilling bit for me – just experimenting.

Some models I've made have problems. I remember one of a horse, which took six of us to put into position. And another of a dinosaur was tricky – it was already built, but had to be made safe by tightening screws from the inside – a job that I was given. And I've had positive comments about the model of a whale I made – mainly about the size of it!

Test 1 answer key

And new projects? Well, I'm into model buildings now – all made out of bricks, like an incredibly tall tower. And one I'm particularly proud of – a model castle, which people say is very realistic. I've now been asked to make a football stadium, including changing rooms and refreshment stands – that could be quite problematic!

Anyway, whenever I'm working on a building, I need to see an example of the real thing. I use the internet, but I need an accurate idea of the dimensions of the place, and the only reliable way to get that is visit it. And while I'm there, I also get the impression of the atmosphere of the place, and see the details – all aspects of my design.

So ... any questions?

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

[pause]

PART 3

You will hear five short extracts in which teenagers are talking about their experience of speaking in public. For questions 19 to 23, choose from the list (A to H) what each speaker felt about the experience. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

In my geography class we spent a week giving class presentations. Unfortunately I hadn't checked what topics other people were doing as we were supposed to. Then one of my classmates did virtually the same presentation I was going to do – I'd spent a long time preparing it and was very pleased I'd got it all done in time. Now I had no choice but to talk about something else and felt a bit uncomfortable having to explain to my teacher what had happened. Some presentations were quite impressive. It motivated me to do my best, even though I did the second one without any preparation. Anyway, people were quite complimentary, which was something.

[pause]

Speaker 2

I was a member of the school debating society and we entered a competition against some other schools. When my turn came to speak I know I must've sounded and looked very nervous, but it was the same for everyone, I guess. Anyway, I'm glad to say I got through it without slipping up or forgetting key facts. I really felt I could've done more thorough research, even though I spent ages on it. My sister had tried to be helpful because she'd done a similar project last year, so I couldn't really tell her I was managing okay without her. Anyway, the main thing was my school won the competition!

[pause]

Speaker 3

I gave a short speech in front of the whole school at our annual prize day. I'd expected to be nervous and sure enough I was, despite all the encouragement from my class teacher. I didn't actually take any of the advice I was offered. I was too busy endlessly rehearsing in front of the mirror. I just thought that repeating it would pay off. Oh well, my pretty average performance was quickly forgotten as it turned out. Nobody commented on it at all, in fact, because one of the teachers made a brilliant speech straight after me and that's all anyone talked about, and fair enough – it was very funny.

[pause]

Speaker 4

I was interviewed live on TV about playing football, because I'd just won an award. I was given plenty of time to think carefully about what I was going to say and make some notes, but it still wasn't enough. The interviewer ran through the questions with me in advance. I just switched off though so that wasn't helpful. I was just in a panic and wasn't able to calm down – it was a shame and I was cross with myself because I've always wanted to be on TV. Friends and relatives were really nice afterwards, saying I came across well but I didn't listen – I know it wasn't true.

[pause]

Test 1 answer key

Speaker 5

[pause]

We had a class discussion last week. I've got some very clever, confident classmates, and I felt I had to make a reasonable contribution. It wasn't a formal debate so I tried talking without notes, but it was difficult to avoid getting things wrong doing that. It was only my class so I shouldn't have felt nervous – I still did though when it came to it. And I found I didn't need all the research I'd done, but still thought it was an achievement to have covered as much as I did. Our teacher is usually very helpful – giving us notes and things. This time he left us to cope on our own though.

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

[pause]

PART 4

You will hear an interview with a student called Laura Benson, who is talking about her experience of studying caterpillars and other insects in a rainforest in Central America. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

- Interviewer: Laura Benson and nine other students recently spent three weeks in a rainforest in Costa Rica in Central America. They were there to help some scientists carry out a study of insects. Laura have you ever been anywhere like that before?
- Laura: We have forests in Scotland where I'm from, so I had an idea what being surrounded by trees was like – there are so many incredible shades of green. In Scotland, though, forests are peaceful places, whereas in Costa Rica they're totally the opposite – full of insects, parrots and other wildlife all calling out to each other. That's what really struck me when I got there. It was over thirty degrees centigrade and extremely humid, but I knew Costa Rica was tropical.
- Interviewer: As I understand it, the scientists were studying varieties of butterflies and the caterpillars that turn into those butterflies. Were you involved in collecting caterpillars for them?
- Laura: Yes. There are hundreds of different kinds of caterpillars there – thin, fat, smooth, hairy ... some look like the leaves around them. The scientists knew exactly where to find them – they'd spot half-eaten leaves and the caterpillars would be there. I didn't have those skills, though. I had to crawl around searching under plants. I used a special scoop tool to pick caterpillars up – that was to avoid damaging them rather than any fear of touching insects.
- Interviewer: Did you help the scientists in other ways?
- Laura: Yes. I helped a Mexican biologist called Ana. She was researching various caterpillars, from tiny ones, to some huge ones the size of your finger. They'd be on a leaf eating it – you know, having dinner – and she'd push them with a stick to see how they'd react. The idea was to find out what methods of self-protection they have. Many would suddenly drop off the leaf and disappear, for example.
- Interviewer: I believe you were asked to take photographs of caterpillars.
- Laura: Yes. That was fun. When they heard I was into photography, two of the scientists asked me to help. They'd found some rare caterpillars, which had only ever been seen in Colombia before, and they wanted to see what kind of butterflies these species would turn into. For their research, they wanted pictures of the caterpillars in different positions – curled up, stretched out, crawling across leaves, munching away at something. It was very interesting.
- Interviewer: You must've learned a lot about caterpillars.
- Laura: Yes, although the researchers said they still don't know much about caterpillars – and we need to know more. Some species cause major problems for farmers. In Costa Rica, for example, where they grow lots of fruit, caterpillars often invade and destroy it. The more scientists discover, the better they will be at preventing that happening. What's even more crucial, though, is that caterpillars are food for other animals like birds and bats. Also, butterflies, which caterpillars turn into, help plants produce fruit.

Test 1 answer key

Interviewer: Did you travel around the jungle much?

Laura: We went on a few trips. I'll never forget one long hike. There was a storm and everything got incredibly muddy, and our guide kept warning us about poisonous snakes. I'm usually pretty calm, but when I got attacked by some mosquitoes and then fell over in a stream, I got very upset and said I wanted to give up. We kept going, though. I can see I was being rather ridiculous and I wish I hadn't reacted in that way. I suppose you can learn from experiences like that, and I'd probably cope better if I ever had that sort of adventure again.

Interviewer: Has your time in Costa Rica affected your ideas about what you'll do in the future?

Laura: Well, I was really lucky to travel to such an amazing place. I don't know if I'll ever get the chance to go somewhere like that again, but it's changed me. I used to think of insects like caterpillars as just annoying really, but now I can see how important they are in nature and how they need to be respected. And watching the researchers there made me realise that a university degree in biology is something that'd suit me when I finish school.

Interviewer: Thank you Laura. That was very interesting.

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I shall remind you when there is one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That is the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
