Audioscript

Test Two.

I am going to give you the instructions for this test. I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1

You hear a girl telling a friend about a family trip she went on to a climbing centre.

[pause]

tone

Boy: How was your climbing centre trip?

Girl: Well, we hadn't studied the brochures very carefully so we weren't sure what to expect – we thought we'd enjoy being surprised when we got there. There was an enormous tower to climb up and then swing down! It did look fun, but it was much bigger than I thought it'd be and I didn't fancy trying it. Everyone else in my family loved it though – in fact, it eventually developed into them all seeing who could be the best at everything. I really wasn't keen on that. Luckily there were some smaller climbing walls too, so I had a go at those.

Boy: Ah, right.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2

You hear a teacher talking to her class about a visit to a science exhibition.

[pause]

tone

Woman: As you know, we're off to the science exhibition next week, the theme of which is fire and light. There'll be demonstrations throughout the day, so we'll check the programme of events to see which ones will be the most interesting – educationally I mean. For example, there's one on what a candle needs in order to keep burning, which we covered in class last week, so take your notes to look at, then write down any additional observations. There's also a display about what happens to light when it hits different objects – hopefully you'll recall that from the homework you were asked to do. Any questions?

[pause]

tone

[The recording is repeated.]

[pause]

Test 2 answer key

Question 3

You hear two students discussing a film they saw on TV.

[pause]

tone

Boy: Did you see that film on TV last night? The one about a girl who was adopted by the politician and his wife.

Girl: Yeah I did, it was unusual and I liked that. It was a bit weird in places, though. I never imagined the girl would have such an impact on the couple who adopted her.

Boy: Or that her adoptive parents would behave the way they did in the end. I thought the actor who played the girl was brilliant. But I wasn't convinced the director made a wise decision about the actors who played the parents.

Girl: They're both famous though, so you can understand why he did it.

[pause]

tone

[The recording is repeated.]

[pause]

Question 4

You hear a woman talking about her work as a fashion designer.

[pause]

tone

Woman: The first piece of clothing I remember altering was a vest I wore in high school. We had a dress code which we had to follow, but I disliked the fact that everybody looked more or less the same. I used to sew things onto my clothing so I was still following the rules about what you could wear at school, but managed to look slightly different. So many people just want to fit in these days, for obvious reasons. But I believe we're all starting to dress in similar ways. My clothes allow people to express parts of their personality that they haven't necessarily shown before, and so their unique character can be revealed.

[pause]

tone

[The recording is repeated.]

[pause]

Question 5 *You hear a student talking about a project he has done on bees.*

[pause]

tone

Boy: I'd like to tell you about a very unusual kind of bee that's found in parts of North and Central America. It's one of several types of nesting bee, which lay their eggs beneath the ground and then head out to search for nectar. This process usually takes place in environments with plenty of flowers, to ensure a reliable supply of food. However, a colony has now been found in the ashes of an active volcano. The area is known for temperatures which can get as high as 42 degrees centigrade. You really wonder how the bees manage to live in this inhospitable place, where little other life is found.

[pause]

tone

[The recording is repeated.]

[pause]

Question 6 *You hear a girl talking about giving up social media for two weeks.*

[pause]

tone

Girl: I took part in a class research project. I had to give up social media for two whole weeks. I imagined I'd find it far too challenging – I certainly didn't think my ability to concentrate would improve so much. Of course, there were moments when it would've been easy to give in to temptation and sneak a look at my phone. After all, no one was checking up on me. And it was obvious nobody believed me when I said I didn't cope too badly without social media, but I didn't care. So I read news websites instead, and realised how much I could learn from them. I've stuck with them ever since.

[pause]

tone

[The recording is repeated.]

[pause]

Test 2 answer key

Question 7 *You hear a teacher telling his students about some research into learning and memory.*
[pause]
tone

Man: Let me tell you about some recent psychological research. You might find it useful. So, the psychologists gave students a list of words for easy-to-draw objects such as 'apple' or 'balloon'. After the researcher called out each word, some students had to write it repeatedly, while others were asked to sketch a picture to represent it. Then the students were given an additional unrelated task while background music was played. After that, the students had 60 seconds to write down all the words they could come up with from the first assignment. Those who'd illustrated the words did a much better job of remembering them than those who'd written them multiple times.

[pause]

tone

[The recording is repeated.]

[pause]

Question 8 *You hear a girl talking about the choir she sings in.*

[pause]

tone

Girl: I'm a member of a choir and, recently, we performed at the city university – an amazing event. It was to mark the fact that the main building was actually 500 years old. And, for the first time ever, we got to sing with an adult choir – very scary, but we were inspired by the example they set, and I was amazed that they actually make a living out of doing it. We were nervous we wouldn't understand their music director's instructions, but we'd had several practice classes with him beforehand. He wasn't particularly impressed with our singing, actually, but apparently we did alright on the day.

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

[pause]

PART 2

You will hear a girl called Kelly talking about an activity called potholing, which involves exploring underground caves. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

My name's Kelly Johnson and I'm going to talk about potholing – that's basically going underground to explore caves. My uncle got me into this unusual activity. A lot of people who explore caves want to study the geology of them, or even the history – because thousands of years ago people lived in them. But he actually took up this activity because he's enthusiastic about extreme sports and potholing was just one of many things he tried.

I live in an area where there are lots of caves so there's plenty of choice for people who love potholing. Everyone wants to visit the Peak Cavern, which is, I think, the largest cave in the area. For my first attempt, I wanted to go to one with the name Dragon Cave – because it sounded cool. In the end, my uncle decided we'd go to one known as Deep Drop, because the conditions there are perfect for beginners.

Inside the cave it was a whole new world. When we got down there, we discovered small rivers running through – I thought that was amazing, and we decided to follow one. In fact a lot of caves have surprising things like that. I've heard of people coming across waterfalls. It's even possible to find underground lakes too.

We had to have the right equipment before setting off on that first potholing trip. A helmet was obviously essential, and we each had a torch with us but mine didn't work properly. It wasn't a big deal though, because I wasn't leading the way or anything. And we wore waterproof clothing because you can get very wet when you're inside caves.

The rocks underground can be stunningly beautiful. And my imagination really got to work. I remember going past a rock formation that was very similar in shape to a dinosaur and I pointed it out to my uncle. Later he drew my attention to some rocks he'd spotted that looked like a sculpture of a bear. Really cool!

It's hard work exploring underground and people get very tired. For this reason my first trip wasn't too long. Even so, my uncle managed to cut his knee – it was really sore actually. I hit my back on a rock and had a good moan about that, but it was really hurting me. And the next day I noticed I'd bruised my arm a bit too – nothing serious though!

Professional potholers say going into caves can be a bit risky. There are falling rocks to look out for, and slippery surfaces that people need to be careful walking on. Flooding is what makes the experts most nervous, but they say you're fine if you check the conditions beforehand.

People going underground have to take different things with them depending on the cave they're exploring – a ladder, for example to help them climb down rock faces or diving gear if they have to go underwater. And nobody could possibly go down there without a safety kit – it should have everything in it that you might need in an emergency.

I enjoyed going with my uncle so much that we went on a second trip together, to a cave which had a narrow entrance so it was really difficult for us to squeeze our way inside. On that same trip we came across a tiny tunnel – too small for us to crawl into, but we could see light at the end of it, which was frustrating.

Test 2 answer key

Since then I've done lots of potholing trips and they've all been brilliant. Once I was in a cave full of what my team leader said were fossils that were 600 million years old. And on another trip I was exploring a cave where there were thousands of tiny insects, which were glowing in the dark – it was so beautiful. That's a moment that really stands out for me. And I'm going to keep exploring caves whenever I can.

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

[pause]

PART 3

You will hear five short extracts in which teenagers are talking about a journey they recently went on. For questions 19 to 23, choose from the list (A to H) what each speaker says about the experience. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

Last summer I went to visit relatives in Australia. It was my first long flight on my own and I was nervous. Everyone kept telling me what I should and shouldn't do: drink lots of water, move around, things like that. I didn't do any of it because I got really comfortable in my seat and I fell asleep, but I was fine. Another time I'd borrow my Dad's camera though. I thought mine would be good enough but I was wrong about that. I could've got some fantastic shots of the city at night when we came into land if I'd had something better with me.

[pause]

Speaker 2

Last year I went on a school trip by ferry to some islands in the North Sea. The crossing was incredibly rough and one of my friends got ill – I felt really sorry for her. I'd actually forgotten to bring the seasickness tablets my mum had got for me – she was annoyed about that – but anyway I felt perfectly okay and actually it was a great experience. I also enjoyed meeting some Spanish students on the boat. I'd been learning the language and it was cool trying it out. We said we'd keep in touch – they're coming to the UK next year. I haven't heard from them yet, but hopefully we'll meet up again.

[pause]

Speaker 3

I went on a journey with my grandparents earlier this year. Before we set off Dad said I should look after them as they're getting older now, but I didn't have to do much, just carry grandma's luggage for her, which wasn't a problem at all. It started badly when we rolled up at the airport thinking our flight was leaving at seven. Grandad's always telling us to get to the airport early – advice my parents never seem to follow – but it was a good job we did listen this time as it turned out the flight was at six. We just made it. If we hadn't, we'd have missed a fantastic holiday.

[pause]

Speaker 4

I really enjoyed a coach tour I went on with my class last spring. It was to see some historic buildings in the north of the country. It was hot on the coach and there was no leg room. My friends complained about that but I didn't think it was too bad. We had an awesome guide who pointed out the different architecture and told us about how incredibly skilful builders were centuries ago. And it helped me make up my mind about what to do after leaving school. I realised architecture's what I want to study. My parents were really surprised when I told them. But they agree it's a good plan.

[pause]

Test 2 answer key

Speaker 5

[pause]

The trouble with flying is there's so much queuing and sitting around on hard seats at airports. And I'm often fed up because I always seem to lose something there. So I never look forward to it. Last year I went to stay with an uncle in the USA. He'd been ill and Mum thought I could take care of him as well as having a holiday. Anyway, on the plane there I was sitting next to a girl about my age and we got talking. Before I knew it we'd arrived. She was so interesting that I forgot about the annoying stuff. I wish I'd kept in touch with her really!

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

[pause]

PART 4

You will hear an interview with a school student from Scotland, called Jake Dawson, who is talking about cycling in the snow in a town in Finland. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

Interviewer: Today I'm with sixteen year old school student Jake Dawson, from Scotland, who's just spent part of the winter with relatives in Finland. Jake, welcome! Did you find Finland very different from Scotland?

Jake: Well, one thing about where I was in northern Finland was that it was dark during the day, and although it isn't always bright sunshine in Scotland in the winter months, that did take some getting used to. The public buildings reminded me of where I come from in Scotland, though – something really impressive about their style. And the streets were always full of activity – the weather didn't seem to put people off, which is hardly the case in my hometown.

Interviewer: Do you go out in the snow in Scotland?

Jake: It's not that I don't go out in snowy weather in Scotland, but I travel around an awful lot by car when I'm there – I did in Finland too. But instead of complaining as I usually do back home, I was able to take in the stunning landscape, and see just how much the snow was a part of that. When I go out in the snow in Scotland, it's a case of having to, for studying and things, not for enjoyment.

Interviewer: And in Finland, you cycled in the snow, which you hadn't done before.

Jake: Yes, back home it's not something people do when it snows! The number of cyclists really thins out then. But to deal with the ice on the roads and make sure you're safe, what you really need is a mountain bike with thick tyres and good brakes – that isn't too difficult to get hold of actually. The thing is we all just assume the temperature's so low that we'll freeze. But in Finland they just carry on as normal.

Interviewer: What made cycling in the snow in Finland special?

Jake: Well, it'd be going too far to say drivers kept out of our way and made allowances for us, but they were never actually aggressive. Getting around in the snow was less tricky than at home, though – there was definitely more done to make sure routes for cyclists could be used at all times – although I did take a deep breath when I had to deal with some of the major crossroads – I'd have been grateful for underpasses for cyclists to use.

Interviewer: And didn't you cycle across a frozen river?

Jake: Yes! It was so cold that the ice was really thick. Some people were lowering their bikes down the bank and cycling across – they obviously thought it was safe – my cousin thought so too. I was pretty reluctant to follow him, but knew I'd never have another chance to do it. So I set off – but then part of the way there I just had to turn back. It looked really dark under that ice!

Test 2 answer key

Interviewer: Did you ever have any accidents while you were cycling in the snow?

Jake: Well, I'd been warned that it's really easy to lose your sense of direction in the snow and I'd been told to pay extra attention to road signs, and also to concentrate on not sliding out of control and letting the bike slip out from under me. But one time that's exactly what happened because I got too sure of myself. Another cyclist behind me had to brake sharply and then actually ran into me. We were both okay, but it was pretty embarrassing!

Interviewer: I can imagine! And were you still keen to cycle when you got back to Scotland?

Jake: Sure! In Finland, I'd been taught that in snow, you should keep your weight back, stay relaxed and not speed, so I made up my mind to carry on doing that back home. I'd recently bought a top-of-the-range bike so at least I know how to ride it properly in bad weather. Some of the guys I go to college with are thinking about starting to cycle there next term to save money, so it might be good to do that.

Interviewer: Well, thanks, Jake for ...

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I shall remind you when there is one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That is the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
