Audioscript

Test Three.

I am going to give you the instructions for this test. I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1

You hear a girl talking about making online videos.

[pause]

tone

Girl: I've always loved watching videos online and that inspired me to make them myself. My idea was to make videos giving advice on fashion, and I did listen to the feedback I got – not necessarily positive – from the people who watched them. I didn't have a particular audience in mind, it was just a fun hobby and I had no big ambitions. Luckily, I had the chance to learn through trial and error. The camera I used wasn't that sophisticated, and I made my films in the evening using a desk light, but you've got to start somewhere! Mastering videos requires patience but I got there by just sticking at it.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2

You hear a girl talking about some photos her dad has taken.

[pause]

tone

Boy: What are these, Kate?

Girl: Oh, they're just a collection of photos that Dad took of me over a 10-year period – he's an amateur photographer.

Boy: Really? They're great! Is he intending to put them up somewhere or something?

Girl: Well, they may well end up in an exhibition, I suppose. But these are really about looking back over what he's done so he can chart his progress, because he's hoping to be good enough to turn professional one day.

Boy: Still, they're a great way of preserving the past, aren't they?

Girl: Yeah, and I think he's actually enjoyed looking back at special moments in our family life.

Boy: I can understand that.

[pause]

tone

[The recording is repeated.]

[pause]

Test 3 answer key

Question 3 *You hear a young man talking about being an inventor.*

[pause]

tone

Man: I invented a smart phone app that gives the location of school buses on a map, and indicates whether you're on the bus and what time you'll be home. People ask me how I come up with new ideas. Well, it's true that many young inventors study websites featuring the latest trends in technology, and I'm sure doing that can generate ideas. Noticing people's frustrations and problems with their everyday routine, you know identifying practical things that need fixing, is another approach though, and that works for me. Some people are born original and imaginative and can get inspiration out of thin air. But I can't seem to do that.

[pause]

tone

[The recording is repeated.]

[pause]

Question 4 *You hear a teacher giving a talk to her class about bats.*

[pause]

tone

Woman: Today we're studying bats – did you know there are around 1,300 species in the world! And most of them fly at night – but how do they manage that without crashing into things – or each other? Well, one called a tube-nosed bat, for example, uses its long nose to make a high whistling call at night to detect things like food sources around it, and to prevent collisions. And another, the greater bulldog bat, can catch fish in open water! It sends out sound waves – by making a high-pitched call – and then detects when those sound waves hit an object, such as a fish! ... Okay, now let's see some photographs of ...

[pause]

tone

[The recording is repeated.]

[pause]

Question 5 *You hear a boy talking about going to take part in an archaeology project in Italy.*

[pause]

tone

Boy: I'm off to Italy soon – to help out on a site where my dad's working as an archaeologist, excavating an old city. Apparently it was once a really amazing place, but then the whole area was mysteriously abandoned. It'd be cool to be there helping when they finally find out why! So I'm keen to go. And actually, Dad's uncovered some evidence that our ancestors originated from there, so he thinks it'd be a real chance for me to learn more about them. I guess he's right – although Dad also thinks I might want to do archaeology myself one day – we'll have to see about that.

[pause]

tone

[The recording is repeated.]

[pause]

Question 6 *You hear a guide at a science museum talking about a new virtual-reality device that visitors can try.*

[pause]

tone

Man: You're probably wondering what this is that I'm holding! Well, it's a virtual-reality headset that allows you to see the world exactly how different creatures see it. So you'll get an insight into how trees and plants might look to different forest animals. You can decide which creature you'd like to be, and that determines which views you'll get – you might be swooping over the treetops, for example, or running around on the ground! And you'll be amazed to find that, according to scientists, many creatures don't see the same colours as we do, so the images of the forest you're in will be totally different from what you might expect.

[pause]

tone

[The recording is repeated.]

[pause]

Test 3 answer key

Question 7

You hear two students talking about some research on listening to music while studying.

[pause]

tone

Boy: I read some research that said listening to music when you're studying helps concentration – a strange subject for research!

Girl: No stranger than other research that scientists do. I think it'd be quite useful. What did it say?

Boy: That instrumental music is better than songs when you're studying – not surprising – you can really be put off if you start singing along.

Girl: Because with songs, you're bound to want to understand what the artist's saying, which is distracting.

Boy: I like listening to upbeat music when I'm studying, though. It makes me study much longer than I normally would.

Girl: If I'm enjoying the music too much when I should be working, then it's anything but helpful.

[pause]

tone

[The recording is repeated.]

[pause]

Question 8

You hear a radio presenter talking about something that happens in space.

[pause]

tone

Man: Here's some exciting news for people living in the northern hemisphere and especially people interested in space – today marks the emergence of the black moon. That may sound scary but it's just the name given to the second new moon in a month. As you may or may not know, a new moon occurs when the lunar orbit is between the Earth and the sun. Therefore, the side of the moon lit by the sun is facing away from our planet, making it virtually invisible to the naked eye. It's actually a very rare occurrence. The last black moon was over two years ago, and the next one won't occur for several years.

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

[pause]

PART 2

You will hear a girl called Alison giving a class presentation about a holiday she had on a traditional sailing ship. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

Last summer, I spent two weeks on a tall ship, travelling round parts of Europe. Tall ships are traditional sailing boats – they're made of wood and have tall masts and large sails. Nowadays, they're used for adventure holidays and teaching sailing skills. I was lucky to be sponsored by an educational charity which was set up to support teenagers who like history – the idea is that helping them take part in certain traditional activities is a good way to do this.

My first day on the ship was spent in port, preparing for the voyage. The ship had fourteen permanent crew members and thirty so-called trainees, who were people like me. The captain gave an introductory speech and I was surprised to hear that there were mainly teenagers on the ship, that nobody, apart from him, was over thirty-five, and that most trainees were between fifteen and eighteen. He also stressed that there could be no passengers on board, meaning that everyone was expected to work.

I already knew I'd be working – I wanted to, in fact. But I must admit, I seriously wondered whether my physical fitness would be up to it. It turned out to be okay actually, and I coped in situations which needed a lot of self-discipline – just having to get up incredibly early, for example.

The trainees were divided into teams and each team worked for four hours at a time – from eight a.m. to twelve, and then another four-hour stretch from eight p.m. till midnight. Every couple of days, we'd get a different shift, as it'd be called on land – it's known as a watch when you're out at sea.

Like most trainees I found it quite difficult to adapt to the timetable – in fact, no one got any sleep at first. Lots of things about being on the ship were new for us – like not having internet access, which was really tough. What I found more challenging than anything, though, was there was no such thing as privacy. For example, I had to share a small cabin with five other people.

But, generally, we all got on well. The work we did varied – we cleaned things, helped in a kitchen, and even took control of the wheel, steering the ship sometimes. That made me very nervous, actually – imagine making mistakes with that! Another thing I did was climb the twenty-metre main mast to help fix something. I've always been terrified of heights and I'm proud I managed to do that.

It wasn't all work, of course. We went swimming a lot, which was good fun, and it was nice just hanging out with the other trainees, you know, just chatting – we needed that time to relax. Playing cards was the main thing we did when we weren't on duty, though.

We stopped at different ports occasionally. We could get off the ship and do things like sightseeing or shopping. There was a market in France, for instance, that many trainees thought was brilliant – I didn't go there because I spent time on a beautiful beach instead – I wouldn't have wanted to miss that. We had a great day in Barcelona too, though unfortunately we arrived just too late to catch the festival that had taken place there.

Test 3 answer key

But mostly, we were out at sea, and although we worked a lot, we still saw some amazing things – like hundreds of dolphins and flying fish. So many of the sunsets at sea are impressive too, and I hadn't been prepared for just how many stars are visible at night – there's no light pollution, of course.

If any of you fancy going on a tall ship, I could give you details of websites to look at, and also some useful tips. You must have waterproof clothes, for example. I didn't take many, but luckily our ship had a good supply of them. I was short of warm jumpers and trousers too, which was annoying because I had to borrow some from another girl.

I'd definitely recommend going on a tall ship if you get the chance.

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

[pause]

PART 3

You will hear five short extracts in which teenagers are talking about making a new friend. For questions 19 to 23, choose from the list (A to H) what each speaker says. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

I made a new friend last week. I was just on the bus to school when this girl sat down next to me and asked if I could tell her which stop to get off at for the City Museum. We got chatting. It turned out she'd come from Canada to visit elderly relatives. It seemed to me that she was a bit lonely so I invited her to come along to a concert at my school that evening. We found out we were both into the same kind of music and were so busy chatting about all the bands we liked that I almost forgot to tell her to get off.

[pause]

Speaker 2

I've known the kid who lives next door since forever, although we didn't really get on too well. But when we were about eight, his father took us to swimming lessons on Saturday mornings. We both struggled at first because we were so scared of the water, but that kind of brought us together and we've been best mates ever since. That's probably because we've found we share lots of interests. He's cleverer than me but that's never really been a problem for either of us. Mum says the way he talks – you know like he's much older than he really is – reminds her of my cousin. I'm not sure about that.

[pause]

Speaker 3

Anna's definitely my closest friend. We've shared lots of good and bad moments over the last few years. I broke my wrist last term, for example, and Anna helped me loads, carrying my schoolbooks, that sort of stuff. We were in the same class at school and I remember thinking when I met her that she looked a bit boring, so I wasn't too friendly and I tried to avoid her. I soon realised, though, that she was just shy and actually it turned out that she's got a great sense of humour. She and her family are moving into our street soon so we're going to be neighbours, which'll be great.

[pause]

Speaker 4

Eric's a really interesting person. I got to know him through a project which involved teenagers in different countries working on producing a website together. He was living in Ireland then. He seemed a really nice guy and I wasn't disappointed when we eventually got together face-to-face. The strange thing is, his dad ended up being offered a job in the town where I live so now we're actually going to the same school. Eric found it quite hard moving to a new place and he missed his school back in Ireland, so I'm sure it helped a lot that he already had something in common with me and my mates.

[pause]

Test 3 answer key

Speaker 5

[pause]

I started at a new school last year. It was exciting but also very scary to be going somewhere five times the size of my old school. So it was reassuring to find myself sitting next to someone I thought I knew – a girl I'd seen visiting my neighbours. We got talking and it turned out she'd never actually been anywhere near our street – the two of them just looked similar. Anyway, we've become really good friends. We both love horseriding and taking photos, and we're both planning to study medicine. I'm sure we'll never lose touch whatever we end up doing.

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

[pause]

PART 4

You will hear an interview with a young man called Oliver Stanford, who is talking about how he became a professional gardener. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

Interviewer: Today I'm with Oliver Stanford, a gardener in a big gardening company. Oliver, gardening's becoming popular with young people, isn't it? How did you get interested?

Oliver: Well, when I was younger, we lived in the countryside. Mum works as an interior designer and particularly enjoyed doing up the inside of the house – which always looked fantastic! The same couldn't be said about the outside, though! That never got much attention – and it wasn't until I started going to friends' houses, with beautiful gardens, that I saw how awful ours looked in comparison! So I talked to my parents and managed to persuade them to help me set about tidying it up.

Interviewer: And you decided to become a professional gardener.

Oliver: Yeah, but getting there wasn't straightforward. My parents offered to provide the money for me to go to university – to study horticulture – I didn't take them up on it. I wasn't convinced doing a full-time degree was right for me. I felt I needed hands-on work experience as well, so I worked as an assistant gardener, while studying for my degree part-time. But I'd underestimated how much effort I'd need to put in – loads of assignments! I got there in the end!

Interviewer: And after graduating, you got your first full-time job at a garden centre.

Oliver: Yes – it was really tough! I started in the winter, outside in freezing glasshouses, putting seeds into pots full of wet soil! My parents had to persuade me not to give up. But I was hoping the experience would help prepare me for the kind of work that lay ahead. Planting seeds then, some time later, selling the fully grown plants, ready to go into someone's garden, gave me great satisfaction.

Interviewer: And you knew you'd make a successful gardener. Where did that confidence come from?

Oliver: Well, I could see that some gardeners didn't really have the in-depth knowledge of plants that I was building up. And I'm aware of what time of year to do things – what can be left for later and what has to be done now – keeping on top of all that is something I've got used to and am now good at – some gardeners find that difficult, and you won't be any good at the job if you can't do that. So what I want to move on to next is designing gardens that people really appreciate.

Interviewer: And now you're working with a firm of city gardeners – very different from what you're used to.

Oliver: Yes, the clients are different too! Many seem to have the idea that we can create the perfect garden in just a week, although my boss always refuses to accept their deadlines – and once they understand why, they're fine about it. I did think we'd have problems with access to clients' gardens, you know, because we need to move quite large machinery in there for some jobs we do. I haven't had any issues with that, though.

Test 3 answer key

Interviewer: Are there any jobs you haven't liked doing?

Oliver: There was one. The house owners were completely changing their garden. The grass had already been taken up and big stones put down, which I didn't think were suitable. Then they asked us to get rid of some hedges that had grown right round the garden. I wasn't keen because they were a habitat for birds and other creatures. Anyway, we did it, but there wasn't much that we could plant instead, as the soil there was such poor quality.

Interviewer: But you really love the work, don't you?

Oliver: Yes – it's great to work outside with other gardeners, even if they're not as into getting their hands dirty and growing stuff as I am! The real appeal for me is that we can arrive in a garden, which is completely overgrown, and we leave it looking spectacular. I'm actually looking forward to getting a flat with a small garden myself – my salary isn't quite sufficient to stretch to that at the moment – but I'm sure that'll change!

Interviewer: I'm sure it will! Thanks, Oliver.

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I shall remind you when there is one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That is the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
