Audioscript

Test Four.

I am going to give you the instructions for this test. I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1

You hear a music teacher talking to members of a school choir.

[pause]

tone

Woman: Okay, I think today's practice went quite well, but remember that the concert is only two weeks away and you could sound a lot better. We've been practising these songs for over a month now, and I've told you to learn them off by heart – which you've done. Each of you needs to be aware of how your voice fits in with the overall sound, and my feeling today was that you're more sensitive towards each other than you were. What needs to come across is the feeling that you're putting everything into these songs. They currently sound quite flat, so there's still work to do there.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2

You hear two friends discussing a presentation given by a writer.

[pause]

tone

Boy: Did you enjoy yesterday's presentation?

Girl: Well, I don't know that writer's work, but I love doing creative writing – it was interesting to hear about some of the things she does to help her develop her stories ...

Boy: Like how she listens to people's conversations to get the language right.

Girl: Yeah, but she doesn't include teenage slang – that's really difficult for someone older to do well. I was impressed at how much effort she makes to get to know real people who she then puts into her books – I'd always imagined writers spend their lives on their laptops trying to work out how their imaginary characters will think and act.

Boy: Yeah, me too.

[pause]

tone

[The recording is repeated.]

[pause]

Test 4 answer key

Question 3

You hear a girl talking about a cycle race she took part in.

[pause]

tone

Girl: I enjoy competitive cycling on off-road tracks, and I've won several races, so it's hardly surprising that everyone just thought I'd win again. In fact, I didn't – I came second – and that was down to me underestimating how muddy the route was going to be. Afterwards, some people criticised me, for being too sure I'd win. Okay – it's true that I'm always quite sure of myself in races – I never assume I can't be beaten though. And I don't have regrets about the amount of practice I did beforehand, because I'd done what I generally do, and any more would've been too much – well that's what I think anyway.

[pause]

tone

[The recording is repeated.]

[pause]

Question 4

You hear a radio item about an art competition in South Korea.

[pause]

tone

Man: The streets of Seoul in South Korea are usually full of activity. But that changes during the extremely wet monsoon season, which keeps people indoors. However, a recent art competition aimed to change this. Artists were encouraged to paint large pieces of artwork, called murals, in different places round the city. The only problem? They had to use hydrochromic paint – only visible when it comes into contact with water. So, to see the paintings, residents had to go outside during the wet weather. The artists who came up with the idea won two of the world's most important prizes, though it's unclear whether residents responded well to this unusual way of creating interest in art.

[pause]

tone

[The recording is repeated.]

[pause]

Question 5

You hear two friends talking about a teenage boy who won a surfing competition.

[pause]

tone

Girl: That TV programme last night about the surfing competition was amazing, wasn't it? I mean, what makes someone decide to enter a competition like that when they're only seventeen!

Boy: Well not many kids like us get that sort of opportunity. I wish I had the chance to do something like that.

Girl: And I'd be really proud if I'd managed to beat all those adults and win – it was strange he didn't seem that bothered about it.

Boy: I thought he'd be making much more of it than he did. But it was certainly a brave thing for him to do.

Girl: Some people don't see the dangers though, do they?

[pause]

tone

[The recording is repeated.]

[pause]

Question 6

You hear a man talking about a problem some turtles had trying to reach a wildlife park in Japan.

[pause]

tone

Man: Every summer, hundreds of turtles crawl to a popular Japanese wildlife park from the nearby ocean in order to find food and shelter. Unfortunately, in the past, some turtles used to get caught between railway tracks which run between the ocean and the park. The turtles were unable to find a safe way out in any direction, so park officials and railway engineers got together to dig small U-shaped ditches close to the tracks to provide safe places for the creatures to remain in until they were found. Since then, railway workers have rescued ten turtles and delivered them safely to their new home in the wildlife park.

[pause]

tone

[The recording is repeated.]

[pause]

Test 4 answer key

Question 7 You hear a teacher telling his class about an 'environment day' the school is having.

[pause]

tone

Man: You all know the school is doing something to mark environment day next month. This is a day when we all think more carefully about environmental issues and about improving our local environment. In other years we've acted on suggestions you've come up with, like picking up litter from the school grounds, and teachers have also asked you to spend time checking websites for detailed information on endangered species and their habitats. These are interesting and worthwhile things to do. What we're looking for this time, though, is to do some long-term good, for example by planting trees. So if any of you would like to volunteer to ...

[pause]

tone

[The recording is repeated.]

[pause]

Question 8 You hear a man talking about an extreme marathon he took part in.

[pause]

tone

Man: Last spring I competed, in the US, in what's called an ultra-marathon. It's a one-hundred-and-sixty kilometre race that only one thousand one hundred people have ever attempted – of those only fourteen have actually managed to complete the course. These statistics don't make you feel too confident as you set off, I can tell you! The route itself is extraordinarily demanding – the unmarked, rocky tracks are dangerous and running at altitude's tough – completing the race has been compared to climbing Mount Everest twice! Then there's the fact that no medical help is provided and there are only two water-filling stations along the route. That's what did it for me in the end.

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

[pause]

PART 2

You will hear a boy called Jake giving a class presentation about birdwatching, which is his hobby. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

I'd like to tell you about my hobby – birdwatching – which I do with my dad. Our favourite place is a lake called Bellewater, which is great for birds but it's a bit far for us to get there too often. We also go to a wood nearer home – we went there last week actually – and a hillside we like is also a place we go to from time to time.

People in the UK generally start birdwatching early in the morning because that's when birds are most active. Actually, there aren't many birds to see right now because it's autumn and many summer visitors have already flown south. The winter is when you get the greatest number and variety here, because birds from Arctic regions come for the warmer climate at that time of year. Birdwatchers also like the spring – that's when all the young birds are hatching.

Many birdwatchers keep records of the birds they see, the dates, locations and so on. I used to write everything in a notebook – basically, I got the idea from my dad – he got me into birdwatching. Then, my cousin sent me a link to a birdwatcher's blog and suggested I try something similar. So I did, and it's been great – loads of people read my blog, even my mum!

There's a sort of birdwatchers' network online and we post links to other blogs we like – I have a link to Red Wing, which is written by a girl called Maisie, and she features a link to In Flight – that's mine. And we both list a link to another blog called Long Feathers, and so on.

The blog was great for a trip we did to Australia. The wildlife there's amazing – not just the birds but other animals too – like the kangaroo, for example. We spotted one huge bird called a cassowary, with a long blue neck and a kind of horn on top of its head – it looked like some sort of dinosaur. There's a photo of it on my blog.

In Australia, I spotted about fifty different birds I'd never seen before. Birdwatchers often keep a count of the types of birds they've seen. The world record-holder's observed over eight thousand different species. I'm currently at nine hundred and twenty, and if I keep going, I should get to five thousand by the time I'm my dad's age – and he's at three thousand two hundred so far!

I like birdwatching for various reasons, though – not just to see lots of them. It's fascinating to observe bird behaviour, for example – like the way they fly together in groups. And there are things I'd love to learn more about. For instance, I often can't distinguish between birds from different sounds they make, though I'm not bad when it comes to identifying differences in their appearance.

You don't have to travel a long way to see birds. We actually get several different types in our garden – having some trees helps. And because I really wanted to study birds in more detail, I made a bird box so that they could build their nests there – I did that a while back. And, not long ago, me and my dad managed to build a bird table and put food on it for them, which really meant I could see them close up.

I used to put out bread for them but apparently that's not a great idea because it contains things that aren't good for birds. Fat, which you can sometimes buy in small balls especially for them, is popular and won't do them any harm. They'll go for various seeds and nuts too, of course.

Test 4 answer key

If you're interested in doing some birdwatching, there are a few things it's good to have. To identify birds you'll need a good reference guide – or you can get an app for this. You'll need a pair of binoculars to see birds properly, and keen birdwatchers often have a telescope. Dad's actually trying to find me one that isn't too expensive and I'm really looking forward to using it when he does. The other thing to have is a good camera. I borrow my dad's actually.

OK, that's all, but if you have any other questions see me after the class.

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

[pause]

PART 3

You will hear five short extracts in which members of a dance class are talking about preparing to take part in a dance show. For questions 19 to 23, choose from the list (A to H) what each speaker says about their experience. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

I learnt so much from rehearsals. People were always giving advice, like how to deal with aching legs and painful feet. I'd heard all that before though – but we certainly needed some energy! My dance teacher made me rehearse constantly to get everything as good as it could be – I even started dreaming about the dances I had to learn. There were sessions where we were told to make up our own dances. We really had to think hard about that but everyone came up with some great moves. That brought us together and made us cooperate with each other and share our ideas. Without that, we'd never have done so well!

[pause]

Speaker 2

We had a lot of routines to learn, but that wasn't a problem because we practised all day every day with a teacher who was really strict with us and made sure we kept focussed and remembered everything we had to do! Anyway, by the time we got to the show, my body was already aching from all those rehearsals! And then the show was so popular that we were told we had to do five extra performances. That kind of thing happens a lot, apparently, so I just learnt to rise to the challenge like everyone else. And it all went really well – we all agreed it felt great when we'd done it!

[pause]

Speaker 3

They warned us younger dancers that we might really suffer with aching bodies after our first major rehearsal but actually, unlike other people in my dance group, it wasn't an issue for me. And as the rehearsals went on, we all began to get excited about the show. But I started to feel I wasn't up to everyone else's level. Then, at one workshop, we had to teach each other some dance moves we knew – we hadn't been told that this was going to happen. Anyway, no one apart from me knew anything about breakdancing and they were really pleased to learn. Even the teacher seemed impressed by what I could do, which felt good!

[pause]

Speaker 4

During rehearsals, everyone was always talking about how they felt – you know – mainly anything they were unhappy about. I found that a bit unhelpful actually – I'm not the sort of person who's comfortable talking about my problems. Anyway, as the final performance approached, we kept running through our routines to make them as near perfect as we could and I found that, as long as I concentrated, it was easy enough to learn my part and so I started to relax about it all. On the night, we all did our best and our teacher seemed to be really pleased with what we'd managed to achieve.

[pause]

Test 4 answer key

Speaker 5

[pause]

During rehearsals, we were suddenly moved to a bigger dance space to get more of a feel of how it would be to perform on stage. We spent hours going over every tiny detail of the performance, which was hard work and very repetitive – it started to make me nervous that we were never going to get things right. But in the end it all started to come together. In fact, my dance director made me believe anything was possible if I was determined enough, and I danced better than I ever would've imagined I could. And the show was a great success.

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

[pause]

PART 4

You will hear an interview with a teenager called Tina Barker, who is talking about a local archaeology project she took part in last summer. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

- Interviewer: Today I'm with Tina Barker, who's been volunteering at a summer community archaeology project which aims to trace the history of her village. But it took time to get started, didn't it Tina?
- Tina: Yes, the idea came from local people who wanted to find out more about the village's history. They settled on the field we're digging in now as a starting point, because an archaeologist came and found evidence that the village had once extended out there. He actually set up the project and looked for volunteers. He stressed to us that it was really important to get suitable tools – so that we didn't destroy things, I guess! Some of the stuff we needed was quite specific to the job we were doing, so it was a while before we tracked it down. But in the meantime, the current owners of the land were impressed by his proposal, and it didn't take them long to decide we could go ahead.
- Interviewer: So what's the group trying to find out?
- Tina: Well, the area we're digging in has never been used for growing crops, so it's been undisturbed for centuries. We think underneath we'll find old roads, and the foundations of a 500-year-old building that we believe was in the area, though we're not too sure what the purpose of it was! The real mystery for me is why the entire population just left the area at one point, for no apparent reason. So I've been helping to look for clues in the village births and deaths records – like being a detective, really!
- Interviewer: And you've found something yourself, haven't you?
- Tina: Yes, a silver wedding ring. The archaeologist on site thought it was over a hundred years old – but not worth a lot. Anyway, what appealed to me about it was imagining how the woman who lost it must have felt – because it must've meant a lot to her. My mum lost her wedding ring in the park last year, and was really upset. We never found it – but I imagine someone looking in a hundred years' time might dig it up. Who knows, maybe they'll even start looking into who its owner was.
- Interviewer: So there's always an archaeologist on site then?
- Tina: Yes, he's great. He's explained how much we can learn from just the tiniest bits of pottery, and how important it is to preserve them. But he'd soon shout at people if he thought they were messing around – I certainly wouldn't want to be shown up like that. And he'd order people off the site if they didn't follow his instructions. But we do try not to cause any damage.
- Interviewer: But I've heard there are cows in the area that could actually do some damage?
- Tina: Mmm, most mornings we'll find the cows have knocked down the temporary fence that's been erected, so they're always wandering into the excavation area – they'll walk all over everything in one part of the site and we don't notice till it's too late because we're busy working in another. They seem genuinely curious about what's going on, but the archaeologist says we'll have to fill everything in again if they carry on, and that'd be a real pity.

Test 4 answer key

Interviewer: But hopefully that won't happen ... So what have you got out of the project?

Tina: Well, everybody agrees it's great to spend time sifting through the soil in detail, knowing you might just discover something about ordinary people living in our village in the past – it makes you forget all your own problems, cos you're so focused on that. And I never saw much point in taking my time over things ... seeing something in the soil, say, and then working carefully around it ... that was a challenge at the outset. I never thought I'd adapt to it like I have.

Interviewer: And the group have found lots of interesting items. Will they be sold?

Tina: Well, I guess that could get us some money to help us continue! Actually, it'd be great if all these items could stay where they were found so that future residents could find out what life was like in their village, but the archaeologist says most of the stuff will eventually go off to big museums, for everyone to appreciate ... Anyway, it's been a great summer!

Interviewer: Thanks, Tina!

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I shall remind you when there is one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That is the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
