Test Three.

This is the B2 First for Schools Listening test.

I'm going to give you the instructions for this test. I'll introduce each part of the test and give you time to look at the questions. At the start of each piece you'll hear this sound:

tone

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You'll have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

[pause]

Now open your question paper and look at Part One.

[pause]

PART 1

You will hear people talking in eight different situations. For questions 1 to 8, choose the best answer (A, B or C).

Question 1 You hear a young photographer who has just taken part in an international photography competition.

[pause]

tone

Girl: I'm glad I entered the competition, even though I didn't win first prize. I've always been fascinated by nature and wildlife. My folks often took me camping out in the wild, and you can't help but be drawn into its beauty. They gave me my first camera and have always been encouraging about the progress I've made. With wildlife photography it's a question of seeing something amazing and capturing the moment – getting that special shot doesn't happen easily – there's a certain amount of luck involved. If my pictures go even halfway to getting people my age to see nature differently, it'll have been worthwhile.

[pause]

tone

[The recording is repeated.]

[pause]

Question 2 You hear a science teacher talking to his students about research into an ancient volcanic eruption.

[pause]

tone

Man: So ... scientists have established that the ancient volcanic eruption we've talked about occurred 1,000 years ago. And how they arrived at that date is interesting – they found a tree that'd been growing near the volcano, which had been preserved in the ash. By counting the rings on the tree trunk – which as we've learnt, can tell you the tree's age – then doing other experiments, they could work out when it was destroyed by the volcano. Of course, as usual in scientific experiments, the data couldn't be accepted until it'd been compared against lots of other data scientists already had. But the findings all confirmed the same date!

[pause]

tone

[The recording is repeated.]

[pause]

Test 3 answer key

Question 3 *You hear two friends talking about football.*

[pause]

tone

Girl: What are those red and yellow cards that referees are always using at football matches?

Boy: Well, yellow's a warning but if someone gets a red card they have to leave the pitch.

Girl: Why can't the referee just tell them to?

Boy: The spectators need to know what's happening. Actually it's interesting – about fifty years ago, an international referee was driving along, saw some traffic lights and thought: 'Yellow means be careful, red means stop, you're off.' And now those cards are used all over the world.

Girl: Well, waving cards around still seems silly to me and I know you're into football, but how on earth did you find that out?

Boy: It's all online!

[pause]

tone

[The recording is repeated.]

[pause]

Question 4 *You hear a boy telling a friend about an ice festival he went to.*

[pause]

tone

Girl: Did you enjoy your trip, Tom?

Boy: It was amazing. There were loads of incredible statues there made from ice. We even had a go at making something ourselves. I did an ice cat – I was pleased with it actually.

Girl: Great!

Boy: And there was a clearing in the forest covered in a sheet of ice, where we went skating and threw snowballs. I could have spent all day there.

Girl: Really?

Boy: Yeah, and there was also a massive ice castle. We walked round that, then sat and listened to a band performing there.

[pause]

tone

[The recording is repeated.]

[pause]

Question 5 You hear a girl talking about playing tennis in international competitions.

[pause]

tone

Girl: People ask me if I'm actually friends with the girls I compete with in big tournaments. Well I'm not that close to anyone, but I feel I need to avoid any tension with people I'm going to keep coming across at tournaments and that means being on friendly terms. We all understand what challenges are involved in doing what we do and can sympathise with each other – that's not quite the same as being true friends though. When I'm winning, for example, I don't want to become involved in talking about my tactics or discussing my doubts or worries so there's got to be some distance.

[pause]

tone

[The recording is repeated.]

[pause]

Question 6 You hear part of an interview with a girl who took part in an extreme marathon.

[pause]

tone

Interviewer: Tell us about the extreme marathon you ran last year.

Girl: It was in Africa – 78 miles in 24 hours. I'd never even done a normal marathon before and I guess I was pretty naïve about the whole thing. Mind you, I only understood that looking back, and realised how lucky I'd been to have got away without any major issues! My family backed me up, but my friends had tried to talk me out of it – that only made me want to do it more though. I thought I'd done enough training, but it still took me 23 hours to finish, which wasn't great. I was shattered at the end! It's not something I'll repeat any time soon.

[The recording is repeated.]

[pause]

Test 3 answer key

Question 7

You hear two friends discussing a news story about a wild animal.

[pause]

tone

Boy: Have you seen that news story about the crocodile on the golf course in the USA?

Girl: Yeah. I saw the clip online. It's actually an alligator, not a crocodile.

Boy: An alligator ... you're right. But it's massive and it's weird seeing it walking across the golf course. Even the guy filming didn't believe it at first and thought it was some kind of joke.

Girl: You can see why he might, though I'm not sure what all the fuss is about – it was in alligator territory.

Boy: The swamps of Florida?

Girl: Yeah. They're famous for the wildlife, and there'll be loads of people there now, trying to get a film or photo of that alligator.

[pause]

tone

[The recording is repeated.]

[pause]

Question 8

You hear a teacher giving feedback to his students about their written homework.

[pause]

tone

Man: Okay – I'm going to give you your work back in a minute, but first I want to make some general comments. I realise that I was expecting a lot of you, and that the project was complicated but I had hoped you'd do more background reading. You seem to have expected to have everything given to you without putting in much effort yourselves. The writing's actually not bad, but the content's thin. You followed my advice about layout but you can't hand something in that just looks good. Please think carefully about the comments I've written on your work, then hand in your finished version before Thursday's lesson.

[pause]

tone

[The recording is repeated.]

[pause]

That is the end of Part One.

Now turn to Part Two.

PART 2

You will hear a man called Alan James talking about his work as a stuntman, performing the extreme action scenes in films, in place of the main actor. For questions 9 to 18, complete the sentences with a word or short phrase.

You now have forty-five seconds to look at Part Two.

[pause]

tone

Hi! I'm Alan James, and I work as a film stuntman! That means I do the dangerous bits of action films, instead of the main actor. So in action scenes, when it looks like a famous actor is running along the roof of a train, that'll be someone like me, *not* the star! But, if you see someone jumping from high bridges, that most likely is me – it now seems to be my area of expertise, as I've done it so many times!

In fact, although these action scenes look dangerous, the teams I work with always adopt an approach that ensures we don't get injured. Proper preparation is obviously part of that – and it's what's known among my colleagues as limited risk. And what that means is avoiding danger, which is our main aim. And it also means a lot of stunt practice, of course.

So how does it feel to actually do the stunts? I think every stunt person reacts differently just before performing an action scene. I can feel my heart beating faster – I put that down to excitement, although some people would say it's nerves, I guess. But I think – if I felt real fear, then I couldn't do the job.

So why did I choose a career like this? Well, I've always been keen on speed. I had a scooter as a teenager, but soon moved on to a motorbike, and became really hooked on racing it, which is what made me want to do a job like this. I've been asked to do all sorts of stuff since: even ride a horse while standing on its back – and I love all of it!

Finding work as a film stunt person is difficult, though – loads of people want to do it! It might seem strange but, in this country at least, there are no specific courses for people who want to do stunts in films. On the other hand, you need certain qualifications to be able to work legally – these are required by regulations set out by professional associations. So it's a tricky situation. Apart from that, as you might expect, I had to prove I could handle various 'action' scenes, including falling off buildings, and swimming in freezing water! You also need a black belt, the highest grade you can get, in something like karate or kung fu. In my case it was in judo, and if you've tried any of those, you'll know why they're important for action films.

What's more, you can't do action scenes until you've had at least 60 hours performing in front of the camera. The most common route for us is appearing as film extras, which increases your performing experience, although some people work as presenters on survival programmes, say.

So ... what's the most exciting action scene I've done? Well, there was a parachute jump from a plane – quite scary, but it's something we often do. And I've even done a flight in a high-speed rocket! Although even that didn't compare with being at the controls of a helicopter in a high wind. Watching the scene in the film afterwards, I must admit it did look amazing – and convincing! But we weren't far from the ground at the time!

Test 3 answer key

So you're probably wondering if there were any action scenes I *didn't* enjoy doing. Well, I remember in one film I was in, when I competed in a car race with the main actor, and then joined in a celebration with him. I was cool with all that – but then I was asked to actually hold a conversation with him. I'm never normally asked to speak on camera, but I had no choice. It wasn't great, though, and it's not one of my strengths.

So if you want to see what I've done, why not watch one of my films? There's quite an old one called *Road Run*, all about an endurance race, which is pretty good, and there's also *Diamond Guy* – as you might imagine, it's about a man selling precious stones and that one'll give you the most accurate idea of what I do. Now, are there any questions?

[pause]

Now you will hear Part Two again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Two.

Now turn to Part Three.

PART 3

You will hear five extracts in which teenagers are talking about weekend courses they have been doing. For questions 19 to 23, choose from the list (A to H) what each speaker appreciates most about the course. Use the letters only once. There are three extra letters which you do not need to use.

You now have thirty seconds to look at Part Three.

[pause]

tone

Speaker 1

I'm halfway through an introduction to a football refereeing course. Some people can't understand why I'm doing it. You know, referees get loads of criticism from players, managers and supporters. But I think it's interesting to learn how to get players to trust you – make them believe you know what you're doing and can handle difficult situations. We discuss videos of referees in action, and do lots of roleplays. I like that active way of learning. Everyone on the course is extremely motivated – they really want to make the most of it. That's what appeals to me more than anything actually. I mean, it's not like school where someone's always saying they're bored.

[pause]

Speaker 2

I'm doing a bicycle maintenance course. I like doing stuff with my hands – it's a change from school – but I'm not great with bikes. The focus is very much on the basics of looking after your bike, and repairing it if something goes wrong. That was explained at the start of the course, and for me it's why it's been so effective. Some people in the group fancy becoming bike experts, but because of what the instructor said, everyone knows that's not what the course is about. And the instructor's very calm – she doesn't get annoyed if you make mistakes, which is quite a good thing. I've learned a lot – even things that have impressed my dad.

[pause]

Speaker 3

I've been having extra maths tuition with two of my cousins. Our tutor puts lots of effort into preparing exercises, which show how maths is relevant to the real world – like in computer programmes. My cousins have really got into maths now and that probably explains why. It contrasts with maths at school, which is quite dry. I'm okay at maths, but it's not my passion, and our tutor realises that and gets irritated with me. One thing I will say, though, is that if I've got a swimming competition, or something else that clashes with the maths tuition, she'll always rearrange the class so we can all be there. She's really good about that.

[pause]

Speaker 4

A few months ago, I saw some DJs playing at a music festival. They were taking different pieces of music – like the rhythm on one track, and the vocals from another – and mixing them in really imaginative ways. I thought: 'I want to do that.' So, I signed up for a DJ-ing course. It's not easy, but the teacher's encouraging and I'm making progress. I DJ-ed at a school event towards the end of the course, and it went down really well. Since then I've had loads of comments from people I hardly know like, 'That was cool,' or, 'Really professional, man,' which makes me feel good. I can't think of anything better really.

[pause]

Test 3 answer key

Speaker 5

[pause]

I've been doing a course called Basic Magic. Our teacher's a professional magician called Whizzo. He taught us some basic tricks, and then he's got each of us to make up our own trick. It's nice he thinks we're capable of doing that. We're supposed to practise whenever we have free time – before bed, in school breaks, you know. He'll watch us doing the same thing over and over again until it's right. He never seems to get fed up. I find that really impressive, but he says magicians have to be like that. When we started, most of the group wanted to do really spectacular magic – we're more realistic now.

[pause]

Now you will hear Part Three again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Three.

Now turn to Part Four.

PART 4

You will hear an interview with a young woman called Laura Wilson, a dancer who gave up dancing and decided to write a book. For questions 24 to 30, choose the best answer (A, B or C).

You now have one minute to look at Part Four.

[pause]

tone

Interviewer: Welcome to our programme on young people who've changed careers at an early stage. We're talking to Laura Wilson, a dancer who gave up dancing when she was 19, and decided to write a book. Laura, tell us first about dance school.

Laura: If you start when you're young, like I did, you're straight into doing practice every day repeating the same moves until they're perfect, and some dancers struggle with that initially. But eventually you feel weird if you don't do it, because it's become automatic. I guess the question of how I'd progress professionally was in my mind even then, but I knew there was time to think about that, as I was so young.

Interviewer: But you gave it up when you were 19. Was that a hard decision?

Laura: It took serious thought. I'd always wanted to dance, and was thrilled to get into a dance company when I was only 12. I'd been hoping for a long career but you just know when you're not quite up to it, and I had to face that. It was a shame, although to be honest, I might only ever have appeared on stage in the back row. I'd had a couple of long-term injuries, too, which didn't help, but at least I've recovered from those now.

Interviewer: So why write a book? It seems unrelated.

Laura: Because I'd joined a company so young, I was well placed to talk to dancers. I'd considered becoming a photographer – dance is a very visual art form – but I soon realised I wouldn't be any good. Then I found there are very few dance books around that show the real life of a dancer. Some for children are very engaging, depicting an almost magical world. And there's no shortage of books out there for would-be actors: how to do auditions, get to drama school – I thought I could fill a similar gap in the market for dancers.

Interviewer: You interviewed lots of dancers. Did one in particular stand out?

Laura: Oh, probably Karen Jonson. She explained that when she joined her dance company she was totally absorbed in herself and extremely competitive – other dancers resented that. And she saw herself as just a dancer. The turning point for her came when she realised dancing and the dance company shouldn't be the only things in her life – they shouldn't define her. I was grateful to her for saying that because reading it'll make a real difference to students starting out.

Interviewer: You've mentioned problems, but do dancers have qualities that give them advantages off-stage?

Laura: Of course – they learn useful life stuff like the importance of hard work. Lots of dancers said that, quite early on, someone told them, 'You won't succeed, you don't have the right body, or the drive,' which initially made them lose motivation, but then instead of accepting it and thinking, 'You know best, I'll give up,' they turned round and said, 'I'll show you what I can do!' I couldn't deal with that criticism myself, and I'm sure it held me back.

Test 3 answer key

Interviewer: Did you include dancers who don't succeed in your book?

Laura: I had to. Unless you're extremely gifted, success isn't guaranteed because dancers have so many things to concentrate on to get their technique up to the right level. There can be many explanations for a dancer failing, so covering that subject in the book would've been over-ambitious. Instead I wanted to say that with the high expectations of dance companies and paying audiences, it's crucial to develop other skills in case things don't work out. Some dancers take up teaching, or discover a talent for choreography, so they benefit from exploring new areas.

Interviewer: What's the main message of your book?

Laura: Well, there's more to success as a dancer than ability. Many talented dancers never make it big, but others use social media and get huge followings, almost building their own brands. It's about being in the right place at the right time, and seizing that moment in the spotlight. You'd like to think dancers are rewarded on merit – but being good is pointless if you aren't given the really glamorous, high-profile parts that everyone wants and everyone knows can make or break careers.

Interviewer: Thanks, Laura!

[pause]

Now you will hear Part Four again.

tone

[The recording is repeated.]

[pause]

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I'll remind you when there's one minute left, so that you are sure to finish in time.

[pause – four minutes]

You have one more minute left.

[pause – one minute]

That's the end of the test. Please stop now. Your supervisor will now collect all the question papers and answer sheets.
