

Test 1 answer key

Reading and Use of English

Part 1

1 C 2 B 3 D 4 D 5 B 6 A 7 C 8 C

Answer key
with extra
explanations in
Resource Bank

Part 2

9 in 10 from 11 order 12 make / find 13 being 14 no
15 what 16 themselves

Part 3

17 unlikely 18 popularity 19 discovery / discoveries 20 valuable / valued
21 consumers 22 recommendations 23 third 24 similarities

Part 4

25 were MADE | to leave
26 would / 'd LIKE | it to
27 fame GREW | as a
28 AWARE (that) you | were going
29 APOLOGISED to Maria | for losing
30 MAY not | be taken

Part 5

31 D 32 A 33 C 34 A 35 C 36 B

Part 6

37 D 38 C 39 F 40 A 41 G 42 B

Part 7

43 D 44 A 45 B 46 B 47 C 48 A 49 C 50 D 51 A 52 B

Listening

Part 1

1 A 2 B 3 A 4 B 5 A 6 C 7 A 8 B

Answer key

explanations in
Resource Bank

Part 2

9 thunder 10 smart / clever 11 detailed information 12 risk(-)taking / taking risk(s)
13 wind direction 14 human input 15 fog 16 guesses / guesswork
17 mathematics / maths / math 18 research scientist

Part 3

19 B 20 C 21 E 22 D 23 G

Part 4

24 A 25 B 26 C 27 A 28 B 29 B 30 C

Audioscript *Test One*

I am going to give you the instructions for this test.

I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound: [tone]

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

Part One.

PART 1 *For each question, choose the correct answer.*

Question 1 *You hear two friends discussing a television programme about an unusual fashion designer.*

Woman: Did you see that programme about the American designer?

Man: You mean the one who makes those unusual clothes? Wasn't it amazing?

Woman: Yes, the way she uses materials she finds herself or gets for free – you wouldn't believe they'd look any good or that anyone would buy them. But they're great, and people aren't put off – she's making loads of money selling them!

Man: You're right, and she's doing her bit to use stuff that would get thrown away otherwise.

Woman: That's an advantage, though I'm not sure I'd actually go out in them, even though I can see why people think they're cool.

Man: Oh, I'd love to see people's reactions if I wore them!

Question 2 *You hear a science teacher talking to a class about the possibility of life on other planets.*

Woman: We've been talking about whether life could exist on other planets in the Solar System or beyond. Well, in the last few years, scientists have found hundreds of planets orbiting distant stars, and many are in the special zone where conditions are neither too hot nor too cold. But some experts say we should also examine planets that don't have such favourable conditions for life. After all, there are forms of life that somehow manage to survive in extremes of heat and cold here on Earth, and even in environments where there's little oxygen. If this happens here, there's no reason why life couldn't also survive on other less hospitable planets, too.

Question 3 *You hear two friends talking about the possibility of having a career in gaming.*

Boy: It'd be great to have a job as a games tester. Imagine being able to play video games all day!

Girl: Even better, you could be a competitive gamer and not work at all – just get prizes for winning competitions. Being a games tester's a slightly more realistic career choice, but don't you have to know an awful lot – to find problems in new games, then work out what to do about them? You must have to study for years to get those skills.

Boy: I'm up for that!

Girl: There are loads of jobs that appeal to me more, though I guess once you know what you're doing, the earning potential would be reasonable.

Question 4 *You hear two friends talking about a film they have just seen.*

Girl: I didn't like that film very much, did you?

Boy: It was OK, I suppose. It certainly made me laugh in places, though I'm not usually keen on that kind of comedy.

Girl: Most people seemed to say it was really amusing. I wouldn't go along with that.

Boy: Well, it was a really talented cast. Especially given how young they were.

Girl: The ones who took the main roles were only 16, but they did extremely well, despite the weak plot. I bet they'll have brilliant careers. And they sang well, too. I thought the songs were fantastic.

Boy: They've become very popular – I can't say they really appealed to me!

Question 5 *You hear a radio item about a prize-winning map.*

Woman: The Authagraph World Map has won the Japanese Good Design Award. It's very different from the traditional world maps, which are based on a mapping technique developed in 1569. Those maps were excellent for navigation, and they're still used in schools today. However, they don't really illustrate the relative dimensions of different countries and seas. So, although Brazil is more than five times larger than Alaska, the latter appears bigger. The new map is much more accurate by comparison. It uses geometric techniques to produce an image that has real educational importance, despite being less visually clear for people trying to find their way over long distances.

Question 6 *You hear a girl talking to a friend about taking part in a photography competition.*

Boy: Congratulations on winning the wildlife photography competition! I've seen your photo online – it looks amazing.

Girl: The one of the rabbit? Yeah – it turned out better than I'd expected. I spent ages slowly getting nearer to the animal, so I wouldn't disturb it. So when I took the picture, it was dozing peacefully in the sun.

Boy: That explains those interesting light effects.

Girl: I think that's what made the photo stand out to the judges. I mean, I could see there were some brilliant entries, but I thought I had a chance of winning, even though I didn't have as much experience as some of the others.

Boy: That didn't matter, clearly.

Question 7 *You hear a teacher talking to students about not being able to finish certain novels.*

Man: Now, our discussion topic for today is that certain novels are impossible to finish! I have to say, I've read hundreds of novels in my time, and tried to keep going, even if some weren't really for me. But you may find some novels are just hard to read, no matter how clever you are, and that's because they're difficult books, so you're absolutely not to blame! As you continue reading a range of books, particularly as you grow older, you'll form a better idea of what you enjoy. However, that doesn't mean you shouldn't occasionally tackle difficult books – they can actually turn out to be very rewarding.

Question 8

You hear a man on the radio talking about a street-art festival.

Man: We're celebrating the tenth year of the city's street-art festival. It's going to be better than ever, kicking off on Friday evening and ending on Sunday afternoon. In addition to murals painted in the lead up to the festival, there'll be 300 artists actually painting as you walk around the city. The later in the weekend you come, the more complete art you'll see, though that does mean you risk missing the process of creating it, which is fascinating, especially for those new to street art. Make sure you pick up a map – the festival's taking place in a number of different streets, and you'll want to make sure you see everything!

That is the end of Part One.

Now look at Part Two.

PART 2

You will hear a teenager called Henry giving a class presentation about his interest in meteorology – the study of weather. For each question, write the correct answer. Write a word or short phrase.

You now have 45 seconds to look at Part Two.

Boy: Hi. I'm Henry and I'm going to talk about my hobby, meteorology. That's everything to do with the weather.

For most people, any interest they might have in the weather starts with a love of clouds, or some unusual weather event. My case was different. I was a nervous little kid, and thunder made me cry. Strangely, lightning, which can be scary, tended not to worry me. Anyway, my dad said knowing what causes things makes you less frightened of them, so he bought me a book about the weather. My interest took off from there.

None of my friends shared this interest, so my parents found an online group I could join. Before doing that, I'd considered myself to be quite smart when it came to knowledge of weather patterns, whereas in that group, I was just ordinary – everyone else knew as much as me. I guess if you're into something, you learn lots about it.

I'm an amateur weather forecaster now – just on social media. People like me can't really compete with the professionals, but we're different in what we report. On TV, they're forecasting the weather for the entire country and have only a couple of minutes to do it, so they don't have time to give detailed information, whereas we do.

Another difference between amateurs and professionals is the pressure on professionals to get things right. Amateurs almost always publish predictions about major weather events before the professionals. That's because they quite enjoy risk-taking – for professionals, that's not so attractive as, for obvious reasons, they need to be more cautious. For the amateurs, it's about getting attention, and if they're wrong, no one really cares.

I've got proper weather instruments now, but I used to make my own. You could try it. For example, you can mark centimetres on a clear container to track rainfall. That can be really interesting to do. For the most useful home-made equipment, attach a cardboard arrow to one end of a straw, then pin it to the end of a pencil. As the arrow spins, you'll get the wind direction by seeing which way it points.

You've probably all got weather apps on your phones, but I'm not convinced they're worth looking at, particularly for rain. The apps rely entirely on computer modelling, meaning there's not enough human input. You really need someone to monitor data and update forecasts accordingly.

Some types of weather are harder to predict than others. I can look at cloud types and predict wet weather and even snow, just from their appearance. Whether fog forms or not, on the other hand, depends on how damp the ground is in a particular area. I often don't know that, so I can't say if it'll occur.

Recently I took part in a weather forecasting competition and finished third. You had to make predictions – number of hours of sunshine, etc. – for three different locations. You could use official sources as well as your own data. I wasn't familiar with two of the places, so some of my so-called forecasts were just guesses. Interestingly, when the correct results were published, I found those were my most accurate answers!

I'd like to study meteorology at university, so I've been looking into what's needed. At school, we usually learn about the weather in geography lessons – at least in this country. Something I've discovered this term, though, is that mathematics, at quite an advanced level, is a requirement to get onto a degree course. And you have to do physics, too, in order to take meteorology at uni, although I was prepared for that.

I've already looked into the kind of job I might do one day. Everyone expects me to be a TV weather presenter. I think it's the only weather-related job they know about, but there are others. Identifying the causes of extreme weather is what fascinates me, so being a research scientist is the route I'd ideally like to go down, rather than being a teacher, which is something people also think I'd be good at.

OK, have you got any questions?

Now you'll hear Part Two again.

That is the end of Part Two.

Now look at Part Three.

PART 3

You will hear five short extracts in which teenagers are talking about an after-school hip-hop dance class. What does each speaker say about the class?

For each question, choose the correct answer.

Use each answer only once. There are three extra answers which you do not need to use.

You now have 30 seconds to look at Part Three.

Speaker 1

Boy: I went along to the class out of curiosity – I guess I was kind of intrigued to find out more about it and whether I'd like it. I knew it'd be quite demanding, though, as it turned out, it was nothing I couldn't deal with. I'm impressed by the person running the class – she treats everyone with respect, she includes them all in the routines, whatever their level, and gives loads of help. I'd hoped the exercises would be good for my balance, which they were, and the positive impact they've had on my football is a bonus. I've discovered that dance has so many benefits.

Speaker 2

Girl: The class is very informal, and everyone can take part. You don't need a good technique either, like you do with some other kinds of dance. Of course, you still have to learn the moves, which can be really complicated sometimes, but that doesn't put me off because everyone in the group's keen to help. That's special, really, and you don't find it in other exercise situations, which can be more competitive. Trying to develop stamina – getting stronger and in good shape – is low on my list of priorities, but I'm planning to find out about the history of hip hop just for my own satisfaction.

Speaker 3

Boy: My reason for joining the class might seem odd, but I was told it was a great way of getting more exercise. And I need to do that to get into better shape and increase my chances of being picked for the hockey squad. The person in charge demonstrates the moves first, which makes everything easy to understand. I'm impressed by how energetic the class is. I've tried exercise sessions before, but lost interest pretty quickly – that's not the case with this class. I can definitely feel the benefit, which I'm glad about, so I'm hopeful about my hockey ambitions.

Speaker 4

Girl: Before I joined the class, I didn't know much about hip hop and how it all began. I only went because my friends persuaded me to give it a go – they were looking for something to take their minds off their lessons. No one warned me how much there was to learn. It's all about sticking to routines and sequences of steps. I guess that's not unlike other dance forms, but remembering them is another thing. The music's fast, and I'm pretty tired after a class. I certainly don't need any more workouts – I get enough with basketball, which I do three times a week.

Speaker 5

Boy: I went along to the class with my friend, not so much for the dancing, which I honestly didn't think would be my thing – I'm more of a basketball person – but I'm really into that kind of music. I never thought I'd have much in common with the others, but that wasn't the case – after the first session, we just started chatting and got on really well. They've been doing it for ages, so were able to give me all sorts of insights into how hip hop started and has developed over time. They've opened my eyes to what it's all about, and now I'm hooked.

Now you will hear Part Three again.

That is the end of Part Three.

Now look at Part Four.

PART 4 *You will hear a young man called Mark Lowe talking about his career in synchronised diving, a sport where divers perform dives in pairs. For each question, choose the correct answer.*

You now have one minute to look at Part Four.

Woman: Mark, you're one of this country's best synchronised divers. Can you tell us what first got you into the sport?

Man: I've been into water sports for as long as I can remember – both doing them and being glued to the TV whenever a big competition like the Olympic Games was being shown. I insisted on joining a swimming club when my older sister did. Initially, I hoped I might make it as a swimmer, but I don't think I'm built for speed. I went to a presentation at our club given by a champion diver, and that's what put the idea into my head. I contacted him for advice afterwards. He had a cousin who was looking for a partner and he paired us up. The rest, as they say, is history.

Woman: You must have to do a great deal of training. How do you feel about that?

Man: Actually, my attitude's changed an awful lot over the last 12 months – in other words, since I started doing well in competitions. I don't think I've changed personally, but in sporting terms I definitely feel more confident. I now try to actually enjoy the hours I spend training daily – even the more tedious bits of it. 'Cos life in the pool obviously becomes pretty much your main focus. There's little time for much else, which is very annoying, but I try not to let that get me down.

Woman: With synchronised diving, obviously your partner is very important.

Man: Sure. We spend so much time together and we're totally dependent on one another. It'd be terrible if we didn't get on. In many ways, we're not alike – he's basically quiet and thoughtful, while I'm much more sociable, for example – but we hardly ever fall out. Perhaps because we're both focused on an identical aim – to win competitions and eventually become world champions.

Woman: How did you feel after winning your first national competition?

Man: It was thrilling, of course. What I didn't expect was how hard it then was to go back into training again afterwards, especially 'cos my social life was starting to become more important for me. And I was beginning to get a fair amount of media attention, which took some getting used to.

Woman: You've started doing some coaching. How's that been?

Man: It feels weird because I'm aware that people probably do look up to me, but I'm not that old myself and I'm coaching several athletes who are much older than me. Strangely, I feel very grown-up most of the time, though it's good to have a laugh sometimes. With coaching, it's business. You're there to do a job, you've always got to tick all the boxes in terms of technique, nutrition, recovery, etc. and insisting on whatever needs to be done to get everyone into the best possible shape – not easy, but I feel I get messages across much more effectively now than I did when I started coaching.

Woman: You've also recently competed as a solo diver. What prompted that decision?

Man: Yes, my partner and I both decided to have a go at that. I was keen to experience what it's like being in greater charge of your own future, whereas his motivation was about trying to cope with the pressure of competing without the support of a partner. It was good for us both, though we're certainly not giving up on our synchronised partnership.

Woman: That's good. Did you enjoy the solo diving experience?

Man: Yes, though it did take a while to feel comfortable with it. The people watching were really supportive, and that helped a lot on the day. I was more aware of them than I've ever been when doing synchronised diving. I guess then I was only focused on my partner, and when he wasn't there, I had the chance to notice other things. I'd done slightly better dives in training, so I need to work on my consistency, but I feel reasonably sure I can manage if I put everything I've got into it.

Woman: Thanks, Mark!

Now you'll hear Part Four again.

That is the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I'll remind you when there's one minute left, so that you are sure to finish in time.

You have one more minute left.

That is the end of the test.
