Audioscript *Test Two*

I am going to give you the instructions for this test.

I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound: [tone]

You will hear each piece twice.

Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.

There will now be a pause. Please ask any questions now, because you must not speak during the test.

Part One.

For each question, choose the correct answer.

PART 1

Question 1 *You hear a boy talking about composing music.*

Boy: I've been composing music since I was seven. I've been lucky enough to get inside a real studio to see a band recording, which was cool and helped me to get ideas for what I'm doing with my music. I wouldn't describe myself as a typical classical musician – I'm more of a crossover 'cos I love all types of music – from traditional to contemporary – that's what my studies have covered. Thinking further ahead, there's nothing I'd like more than to be able to produce a genuinely original sound. That's easier said than done, though, because all musicians agree that they're influenced by the many types of music they listen to.

Question 2 *You hear two friends talking about a news story they have read.*

Boy: Did you see that documentary about the Great Barrier Reef in Australia?

Girl: Yes – about how the reef is being damaged – I was shocked! Then I read that things aren't quite as bad as they made out. Why does the media always make things sound worse than they are?

Boy: Is that such a terrible thing, though? It draws people's attention to what's happening and it is a serious problem. People do need to be told about these environmental concerns, I think, even if it worries them, so they're encouraged to take action – do conservation work, maybe. I'm going to read up on that – see if it's something I can get involved in.

Question 3 *You hear two friends talking about a film they have both seen.*

Girl: Have you seen *Dinosaur World* yet?

Boy: Yeah, last week.

Girl: What did you think?

Boy: Not sure. I mean, you knew exactly how it was all going to end.

Girl: I thought they'd come up with something a bit more original – there weren't any real surprises. And I wasn't convinced by the hype – I mean, everyone going on about how the actors brought it all to life.

Boy: They managed to make it a bit more believable. And the background music did seem to add to the tension I thought ...

Girl: Well, there'd be this big build-up in the music, then the action was nowhere near as dramatic as it led you to expect.

Question 4 *You hear a boy telling his friend about a TV programme.*

Boy: Did you see that TV programme last night about an oak tree?

Girl: A documentary about one tree! I gave that a miss.

Boy: I didn't think it'd be for me either, but after five minutes, I was hooked. This scientist was monitoring the tree through the seasons – he looked at why leaves fall in the autumn, for example. He reckons the tree can kind of see – there's a pigment in the leaves that lets them know when to drop off by sensing changes in the light. It really was unbelievable. Apparently, the tree doesn't really react to temperature change – that can't be relied on to remain stable anyway these days.

Girl: Right.

Question 5 *You hear two friends talking about the snowy weather.*

Girl: This snow's beautiful! It makes everywhere look really pretty.

Boy: Guess so. But the roads are very slippery. My brother fell off his bike this morning – he didn't hurt himself, fortunately.

Girl: Yeah, you just need to be extra careful. Everyone's got out of practice coping with it, as it's so long since we had any snow here, but it'll be great if it stays around for a while.

Boy: My parents are complaining about how difficult it makes getting from place to place, but I hope it lasts for ages. Everywhere looks so picturesque.

Girl: As long as you've got appropriate clothes, of course. Which I have. I just don't get enough use out of them!

Question 6 *You hear a fitness instructor talking about strength training for teenagers.*

Woman: Research suggests that it's OK for teenagers to take up what's called strength training – that is, specific exercise designed to build your muscles. If this interests you, then to reduce the risk of injury, you shouldn't push yourself very hard, particularly when you first start. And although gym membership will give you access to the best running machines, weights and so on, you'll find things around the house you can use instead – stairs for doing step-ups, for example. There are some helpful videos online. And, rather than beginning with exercises that look easy and fun, choose those that you think will help with whatever aspect of fitness you're working on.

Question 7 *You hear a teacher telling her students about some homework.*

Woman: I'd like to say something about your upcoming homework. It's an essay, so as usual, you'll need to think about how you're going to organise it before you start writing. This time, though, just reproducing what you've read or been told won't be sufficient. I want to know that you've thought for yourselves and used your imagination. I see so many essays that just include chunks of information from websites and they're nothing special. The thing is, if you just write down everything you find online, you'll find your ideas get muddled and your main points will get lost.

Question 8

You hear a girl telling a friend about going sailing with her family.

- Boy:** Did you go out on your family's boat yesterday?
- Girl:** Yeah – I had to keep an eye out for signs of bad weather because a storm was forecast.
- Boy:** Big responsibility!
- Girl:** Yeah, but I've spent ages studying cloud patterns on a website at home, so I'm tuned in to that sort of thing now. The wind's another thing to watch.
- Boy:** And that helps predict storms?
- Girl:** Well, Dad watches out for variations in air pressure and temperature, too – we have instruments for that. Then if a storm's coming, he gets us to tie down anything loose, and then we head for shore.
- Boy:** Wow – it must be exciting!

That is the end of Part One.

Now look at Part Two.

PART 2

You will hear a girl called Nadya giving a presentation about the city of Singapore, in Southeast Asia, and the efforts to make it more environmentally friendly. For each question, write the correct answer. Write a word or short phrase.

You now have 45 seconds to look at Part Two.

- Girl:** Hi, I'm Nadya. I'd like to tell you about a trip I've been on with my family to Singapore. Singapore is a very 'green' city, and there are lots of initiatives there to protect the environment.

Singapore is one of the hottest places on our planet, and the authorities there have been trying to find ways to cool it down. One of these has been to plant more trees around the city, and amazingly, the air temperature has been lowered by two degrees centigrade, simply through doing this. This is because they provide shade and release cooling water vapour through their leaves.

A recent study of the city concluded that 30% of it is now given over to plants and other vegetation. These can be seen not only on the ground, but unusually they're all over the buildings, too, and make them look as if they're part of the natural environment, which is lovely – especially in a place where few people have private gardens.

The most stunning place we visited in Singapore was the Gardens by the Bay, a park, which actually has three separate gardens inside it. We spent most of our time in the very popular Bay South Garden, where there are two glasshouses, in which a huge variety of plants are grown. What fascinated me about these structures is that they're extremely energy efficient because of the way they're made.

The Flower Dome is the largest glasshouse in the world, and also has different gardens within it, such as the so-called 'Bottle Tree' garden with baobab trees, which, because of their long trunks, seemed very unusual to me. The flowers in the Australian Garden were my personal favourites – they looked so exotic. I don't know how rare those flowers are in Singapore, but I'd never come across any like them before.

The second glasshouse is called the Cloud Forest, and this has a different climate. Inside the glasshouse, there's a large mountain, which, although it's artificial, we thought looked absolutely amazing. And along the way, you find the waterfalls, which are some of the world's tallest – it certainly came as a surprise to see them in an indoor setting.

Possibly the most famous place in the gardens is 'Supertree Grove'. The supertrees are enormous structures, and I was astonished at how beautiful an artificial structure could be. Although they're man-made, they also have plants growing around them. Later in the day, I was excited to see the supertrees lit up against the night sky – they were awesome!

The Gardens by the Bay also have sculptures dotted around them. For example, there's a bird created entirely from tree roots – I found that interesting – and a giant bull made from bronze, which was superb. I stood and stared at that for ages. Another popular sculpture was of a floating baby – a strange choice for the gardens, I thought.

The Gardens by the Bay are a brilliant example of how Singapore is tackling climate change, but it isn't the only thing Singapore's done. The country is also putting in place what's known as the 'Green Plan'. One of the plan's objectives is to provide habitats, by extending the parks that are already there, for a variety of insects, birds and small mammals.

Another thing that the Green Plan hopes to do is improve the city's transport system to encourage people to drive less. The transport system includes a reliable bus service, which is already running on green energy, and its rail network is on target to grow considerably and have the greatest impact on travel in the city. There are also a number of cycling paths crossing the city, and hopefully there'll be even more of these in time.

The city's also trying out ways to deal with air-conditioning problems. Currently, air-conditioning uses lots of energy because many apartments have individual air-conditioning units. But these are being replaced by underground pipes that will transport chilled water from a centralised system. It's predicted that this'll cut energy use by 40% and reduce carbon emissions.

Every city should be like Singapore!

Now you will hear Part Two again.

That's the end of Part Two.

Now look at Part Three.

PART 3

You will hear five short extracts in which teenagers are talking about poetry. What does each speaker say about why they didn't like poetry in the past?

For each question, choose the correct answer.

Use each answer only once. There are three extra answers which you do not need to use.

You now have 30 seconds to look at Part Three.

Speaker 1

Being asked to explain a poem in class is something most people my age are familiar with. Unlike a lot of my classmates, who struggle with it, I'm usually able to see what the poet's getting at. I quite fancied trying to come up with one myself, though we were never given the chance, which put me off the lessons. Then recently, we got a new teacher. He showed us a selection of poems, and then said, 'OK, now see what you can do'. At first, I found it frustrating, but once I got going, I really got into it. And for the first time, I enjoyed a poetry lesson.

Speaker 2

I've always loved reading – novels, not poems. We occasionally read and discuss poetry in class, but not often. It has a bit of an image problem, doesn't it? Until recently, I thought it was enjoyed by a select group of intellectuals, but no one else. Then I went to a festival, and heard someone performing spoken word which, unlike more formal styles of poetry, is written to be spoken in front of an audience. The poet wasn't much older than me, and her work was about growing up in a city like mine. It blew my mind! Since then, I've looked up poetry online, and found some I really like.

Speaker 3

Whenever the teacher says, 'Today we're going to analyse a poem,' everyone protests! It seemed so hard – how are you supposed to unpick complex themes when they're being expressed in just a few lines? I used to be one of those protesting, until I heard a poet being interviewed. He said a poem isn't a puzzle to be solved. There's no single interpretation – the only thing that matters is how the poem makes you feel. Realising that opened my eyes. Now when we're presented with a poem at school, I just say how I feel about it, and I've never been told I'm wrong, though I still don't feel ready to try writing one myself.

Speaker 4

Until this year, poetry had never appealed to me much. It seemed so limiting. The poetry I'd seen made me think every poem had to have a certain number of verses and lines. The teacher I have this year, though, she's had us going through song lyrics and funny rhymes. She wasn't against us writing a few lines of poetry ourselves. We could read them out to the class if we wanted to, although we didn't have to, so I didn't do that. We've all loved her class, and it's completely changed my opinion on poetry.

Speaker 5

The way poetry was taught in my previous school didn't really inspire me. The teacher only seemed to care whether we could perform a poem in front of the class from memory without looking at the book – as if that was the only thing that was important about poetry! Thankfully, it's different at high school. We look at stuff like what the poet is saying, why they chose certain words, and how their poem makes us feel. It's made me want to look up poetry sites online. There's so much out there. No one can say 'poetry's not for me' – you just haven't found the right poet yet!

Now you will hear Part Three again.

That is the end of Part Three.

Now look at Part Four.

PART 4

You will hear an interview with a woman called Becky Lowe, who has worked as a professional gamer and team manager in e-sports, which is competitive video gaming. For each question, choose the correct answer.

You now have one minute to look at Part Four.

- Man:** Today, we're talking to Becky Lowe. Becky is the manager of an e-sports team after retiring as a professional video gamer. Becky, how did you become a professional gamer?
- Woman:** I was 17 and e-sports – competitive video gaming – was just taking off. I loved gaming, and at one amateur tournament I'd entered, a woman approached me and asked if I'd join her professional team. Many other gamers were being recruited at amateur tournaments like that. Going professional meant giving up on going to university, which my parents were worried about – 'How secure could a job playing video games be?' they rightly asked. But being paid to do something I loved was too tempting.
- Man:** What qualities does a competitive gamer need?
- Woman:** Whatever video games you play, you must be willing to practise for at least six hours a day. I specialise in strategy games. The other two categories are sports and shooting. With those, you've got to be able to respond extremely fast to what's happening, and to avoid panicking in stressful situations. Those principles apply to the games I play, but they're not as important as being good at going over in your mind – objectively – the arguments for and against different actions, which is my main strength.
- Man:** As a gamer, how did you prepare for tournaments?
- Woman:** As a professional, whenever you play, it can get recorded online, and in our team, we always watched the teams we were due to come up against – we'd look carefully at their strengths and weaknesses. We'd also watch recordings of games we'd been involved in, trying to work out what we were doing wrong – it could be very useful, though it wasn't often great for my confidence. We'd also try out moves and tactics we hadn't used before – if they didn't help, which was often the case, we'd reject them, but occasionally they'd come in handy.
- Man:** Recently, you became the manager of an e-sports team.
- Woman:** Yes, after ten years' gaming, I needed a fresh challenge. As a gamer, I was only responsible for myself, but now I have responsibility for all sorts of things – organising training, recruiting players, dealing with tournament organisers, and making sure the whole team's happy. Communication and having insights into the diverse nature of a team – an awareness, for instance, of when a gentle approach, or the opposite, may be appropriate – is something I've got plenty to learn about. Unfortunately, not everyone likes the choices I make.
- Man:** Is physical exercise part of your team's training?
- Woman:** Yes. Gaming for hours every day is exhausting, and my players – like most gamers nowadays – all fully accept they won't be competitive unless they're in good shape – something that anyone used to the traditional image of gaming being unhealthy is amazed to learn. My gamers spend an hour in the gym every day, and they can be there – doing weights, running, stretching – from seven in the morning, even when they've been gaming until late the previous night.
- Man:** And you have a book about e-sports coming out.
- Woman:** Yes, it's called *Next Level*. It's an introduction to e-sports for people who don't know much about them, though hopefully fans will like it, too. There are a few introductions to e-sports already out there, but they're all by male journalists, whereas this one's based on my experience as a female gamer. It looks at the origins of e-sports, major problems the industry has encountered, and key recent developments.

Man: Is it sensible for young people to consider a career in e-sports?

Woman: Sure, provided they think carefully about what's involved. For many teenagers, e-sports is all about games and gamers, and nothing more. But roles in the sector aren't limited to just gamers as they assume – far from it – and that's worth remembering. I wouldn't want to discourage anyone who dreams of being a pro gamer, but only a small minority have what it takes to establish a professional career. The life of a pro gamer isn't easy.

Now you will hear Part Four again.

That's the end of Part Four.

There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I'll remind you when there's one minute left, so that you are sure to finish in time.

You have one more minute left.

That is the end of the test.
