

# Test 4 answer key

## Reading and Use of English

Answer key  
with extra  
explanations in  
Resource Bank

### Part 1

1 C    2 D    3 B    4 B    5 A    6 C    7 D    8 A

### Part 2

9 what    10 before    11 One    12 whose    13 for    14 across / upon  
15 spite    16 is

### Part 3

17 inhabitants    18 officially    19 belief    20 existence    21 dependent  
22 recommendation    23 behaviour / behavior    24 insight

### Part 4

25 to be | further / farther APART  
26 in CASE | your cousin finds  
27 I WOULD / 'D | have / 've bought  
28 RESPONSIBLE for | sorting / working  
29 us to | take ADVANTAGE  
30 won't / will not | go AHEAD

### Part 5

31 B    32 A    33 D    34 C    35 C    36 D

### Part 6

37 D    38 F    39 B    40 G    41 E    42 C

### Part 7

43 B    44 D    45 C    46 B    47 C    48 A    49 D    50 C    51 B    52 D

## Listening

### Part 1

**1 A    2 A    3 A    4 C    5 C    6 B    7 B    8 A**

Answer key  
with extra  
explanations in  
Resource Bank

### Part 2

**9 ship    10 welcoming    11 (a) (picture) gallery    12 (a) volcano**  
**13 (a) street scene    14 beaches    15 (her) wrist**  
**16 team sports    17 videos    18 (a) dragon**

### Part 3

**19 H    20 C    21 A    22 G    23 F**

### Part 4

**24 A    25 C    26 C    27 B    28 C    29 B    30 B**

**Audioscript**     *Test Four*

*I am going to give you the instructions for this test.*

*I shall introduce each part of the test and give you time to look at the questions. At the start of each piece you will hear this sound: [tone]*

*You will hear each piece twice.*

*Remember, while you are listening, write your answers on the question paper. You will have five minutes at the end of the test to copy your answers onto the separate answer sheet.*

*There will now be a pause. Please ask any questions now, because you must not speak during the test.*

*Part One.*

**PART 1**     *For each question, choose the correct answer.*

**Question 1**     *You hear a boy talking about a weekend course he attended at a science museum.*

**Boy:** My cousin persuaded me to join him on a weekend course at the science museum 'cos he didn't want to go on his own. It was a course about physics, which is a subject that's always fascinated me. I actually ended up enjoying it more than he did. There were loads of hands-on things organised for the 20 of us on the course to do, not to mention quizzes and all sorts of other fun stuff. That's what I really appreciated about it. And it was good to get to know the other kids in the group, too.

**Question 2**     *You hear two friends discussing a new computer game.*

**Boy:** Have you played that new computer game *The Last Dawn* yet?

**Girl:** Yes! I couldn't stop! It's addictive. And then I was so upset when I finished it.

**Boy:** But you can have another go and make different decisions as you go along.

**Girl:** Yeah, I might do that. I mean, at first glance it seems as if it's rather easy and that there really isn't much to it, but actually the makers have gone into great depth, and the historical accuracy is incredible. I just know it's something that's going to stay with me.

**Boy:** It certainly sticks in your mind. Probably because it makes you think so much about people's lives in that period.

**Question 3**     *You hear a boy talking to a friend about their homework.*

**Boy:** I haven't even started my homework, and it's due in on Friday. I've no idea what to do!

**Girl:** I've asked for more time when that's happened to me before, but you probably don't want to do that. It's a pity you didn't make more notes during the lesson. That's what I did. Then there's a website I found that gave me more useful information – I can send you the link, but you probably haven't got enough time to check it out.

**Boy:** Couldn't you just let me see what you've written?

**Girl:** I think it's better if you do it yourself.

**Question 4**      *You hear a teacher talking to his class about learning Chinese.*

**Man:** Today, we're going to have our first Chinese language lesson. As you know, the writing seems very different from English, as is the pronunciation, which may make it seem strange and unfamiliar at first. But contrary to what you might think, grammatically, there's actually less challenge than in some other languages you're more familiar with. Like any language, it'll take time to master it, but confidence is half the battle. So my aim is to make the lessons motivating and help you get to grips with a really useful language.

**Question 5**      *You hear two friends talking about holidays.*

**Girl:** Our last holiday was great, but I'd been so busy at school, I was still buzzing when we arrived at our hotel – just couldn't relax. That was annoying.

**Boy:** Well, on our last holiday, instead of doing homework every evening, I was reading poems, and even trying to write them myself. And I carried on writing after we got back, which helped me feel better about getting home again, and back to school.

**Girl:** Since we got back, I've been exploring new locations for taking photos, like I did on holiday, rather than revisiting the same boring ones.

**Boy:** Great!

**Question 6**      *You hear a teacher talking to his students about reading some poems.*

**Man:** Today, we're studying a new collection of poems by a local writer. The theme is modern living – the difficulties we face, but also some positive aspects. And this is expressed through very experimental poetic phrases – you'll come across some good examples as you're reading, so remember to underline those that stand out as unusual or surprising in some way. Nature also features in her writing, and you may even recognise some of the places she mentions, as she does write about this area. The poems may appear simple, but if you were to try and do something like it for yourself, my guess is you'd appreciate the complexity of them.

**Question 7**      *You hear a scientist talking about her observations of wild birds called jays.*

**Woman:** Jays belong to the Corvid bird family – highly intelligent birds. Jays' behaviour suggests they're capable of self-control, as instead of immediately eating the food they find, they put it in a 'secret' place and save it for later. Jays do this carefully, as their food's often discovered and eaten by other birds, such as crows. To investigate their self-control, I did an experiment. I offered the jays either cheese to eat straight away or worms, which they liked more and could see behind a screen, but had to wait to eat until I'd removed the screen. Incredibly, the jays learned to wait for their favourite food instead of eating what was immediately available.

**Question 8**

*You hear two students talking about an art lesson they have just had.*

- Girl:** Mrs Carr gave us lots of ideas about different techniques we could use, and I tried to, but my picture didn't come together as I'd hoped.
- Boy:** Your work was really creative – like most of the students, apart from me. Anyway, she did say she'd get us trying new stuff this week.
- Girl:** But it's just that I'm more into using shapes and colours to give a rough idea of how things look rather than doing exact, life-like portraits of our classmates, as she'd wanted.
- Boy:** Well, I couldn't work out how on earth I'd do what she was suggesting.
- Girl:** Why not have a look through some art books?
- Boy:** I might have to.

*That's the end of Part One.*

*Now look at Part Two.*

**PART 2**

*You will hear a girl called Anna giving a class presentation about a new leisure centre she went to recently. For each question, write the correct answer. Write a word or short phrase.*

*You now have 45 seconds to look at Part Two.*

- Girl:** Hi! I'm Anna, and I'd like to tell you about a new leisure centre I went to recently – it was amazing! I'd been told that the building looked a bit like an enormous factory, and that I'd find it under a large bridge. In fact, as I approached, all I could see was something resembling a huge ship – that turned out to be my destination!
- However, as soon as I stepped inside, the receptionist greeted me with a smile, and the manager was also very chatty. It was all so welcoming, and far from the rather scary impression I'd got of the place before I went in.
- And it turned out the centre offered lots of different facilities – there was a gym for teenagers, and a café, too, which I thought looked great. There was even a picture gallery right under the roof. I was really surprised by that! And from there, I could look down on people coming up the amazing climbing wall that went all the way from the bottom to the top of the building.
- Then I checked out the different skateboarding areas. There were two different levels, and the one on the first floor was where I started. It was all made of wood and had a really high slope that I spent ages skating down and jumping off. Then I discovered a piece of equipment known to the people there as a volcano, which I'd never seen before – it looked like a model of the real thing. I had the greatest fun on that!
- Then I went up to the second floor, where the skateboarding area was a very realistic copy of a street scene. So there were steps to skate up and down, which I'd never tried to do because the skatepark I used to go to near home was more like a car park with lots of ramps in it, and these were easier to skate on. So the change was very exciting for me!
- The only slight downside for me was that you couldn't see much from the centre's windows. It had been built some distance from the cliff, overlooking some beaches, which were truly spectacular – but not visible at all once I went inside. That seemed like a missed opportunity by the architects.

Anyway, while I was skating, I did fall heavily on my knee, and thought I'd hurt it. The main damage was to my wrist, though, as I reached out with my hand to save myself when I fell. And because of that, I was forced to rest on one of the seats for a bit. My ankle got slightly twisted, too, although it wasn't painful, luckily – I was soon good to go again!

While I was at the centre, I discovered that the people responsible for its design had been involved in various sports, and wanted to provide more sporting opportunities for local teenagers. One of the designers had been involved in water sports, and others had taken part in competitive sports, such as football. But their intention was that the centre should principally be for young people who weren't into team sports at all, to give them another outlet for physical activity.

I also discovered that the centre ran regular workshops on topics connected with the activities there. So it was possible to go to classes on creating videos, which I really wanted to sign up for, or making T-shirts – which sounded a little less exciting! And apparently the most popular was designing online games, although I wasn't sure my computer skills were up to that!

I had a great time! But I realised during my visit how shabby my skateboard looked. It needed to be painted with a new design. I saw several different ones at the centre – the most popular design for a skateboard seemed to be a horse, although I'd seen a great drawing in an art book showing a dragon, so that's what went onto my board when I got home, to replace my original design of a tiger. Anyway, I hope you'll want to visit the centre, too.

*Now you'll hear Part Two again.*

*That's the end of Part Two.*

*Now look at Part Three.*

### PART 3

*You will hear five short extracts in which teenagers are talking about photographs that have a special meaning for them. What does each speaker say about the photograph?*

*For each question, choose the correct answer.*

*Use each answer only once. There are three extra answers which you do not need to use.*

*You now have 30 seconds to look at Part Three.*

#### **Speaker 1**

The photo I use on my phone's home screen shows a remote beach near where my grandparents live. It's probably my favourite place in the whole world. If I'm a bit upset about something, I open my phone and imagine I'm there at the scene. That usually transforms my mood at once, and I'm no longer worried or cross. I took it one New Year's Day when Grandpa and I went for a long walk, and he told me loads of amazing tales of his life as a kid and a young man. I'm just sorry he isn't in the photo – he always says he hates having his picture taken.

#### **Speaker 2**

This photo shows me on my last day at my old school. Most of my classmates were moving on to the same secondary school, but my parents had got work in a different town, so I was going to have to transfer to a school where I wouldn't know anyone at all. My best friend took it without me noticing, and she was fortunate enough to catch me looking totally natural, a bit sad at the thought of having such a huge change in my life, but happy too because it was going to be the start of a new adventure. It's a nice memory of a day I'll never forget.

**Speaker 3**

My favourite picture's probably the one I use as the screensaver on my laptop. I took it when we were on a family holiday in South Africa. It shows an aardvark. They're very shy nocturnal animals – it's rarely possible to spot one. I'm so glad I had my camera with me, and my parents couldn't believe how well my picture came out. Looking at the creature's slightly startled expression reminds me of the extraordinary wildlife we share our planet with. I think that this image in a way represents one of the main reasons why I've always wanted to become a professional wildlife photographer.

**Speaker 4**

I took this picture on holiday a couple of years ago. There was this amazing sunset one evening. Like everyone else on the beach that day, I couldn't resist taking lots of pictures of it. None of them does it justice – I didn't think they would, but I still wanted to have a go. And I'm glad I did, because Mum then persuaded me to enter this particular image in a competition. It didn't win, but I got a runner's-up prize – a free place on an online photography course. The tutor was totally inspiring – he's made me absolutely determined to carry on improving my skills.

**Speaker 5**

I love pictures of people or animals doing unusual things, and this image of my brother is one of my favourites. My cousin Jack managed to catch him when he wasn't expecting it, and his expression's hilarious. It shows him dressed as a clown in a show put on by a drama club we belong to. He hates the picture – he says he looks really silly in it – but I think it's brilliant. Jack's really into theatre, and I'm so grateful to him for introducing me to the fun of being on stage. For me, rehearsing a play's the best ever way of switching off after a busy week at school.

*Now you will hear Part Three again.*

*That's the end of Part Three.*

*Now look at Part Four.*

**PART 4**

*You will hear an interview with a young woman called Clara Shenley, who is a games designer. For each question, choose the correct answer.*

*You now have one minute to look at Part Four.*

**Man:** Today, I'm talking to Clara Shenley, who designs computer games. Clara, I'm sure lots of our young listeners have thought about being games designers. Is it an enjoyable job?

**Woman:** Absolutely. For most people like me, games are a hobby as well as a job, so we tend to get on well with each other, and hang out together after the working day is over. That doesn't mean we spend the rest of our time gaming, though. Contrary to what you might think, games – particularly the outstanding ones – are inspired by a range of things, from novels to documentaries, so it's important not to dismiss such things as being of no benefit for games design.

- Man:** What would someone need to do if they were interested in becoming a games designer?
- Woman:** Well, for anyone who's a regular gamer, it's worth thinking about why each game works or doesn't, and how you'd improve it. And have a look at the numerous tutorials online about games design, too. There are some good ones offered by professionals in the gaming world. But it's probably best to do those things as well as going to university and meeting like-minded people.
- Man:** And would you say it's a challenging industry to work in?
- Woman:** Yes, for many reasons. Developing a game that has something more to offer than those already on the market is tough. But you could produce the coolest game ever, and if no one knows about it, you might as well not have bothered. You have to get it in front of the right people – onto appropriate websites and so on. That's what's really tricky. And it's obviously important to get it done by the agreed date.
- Man:** Is it true that games designers get to play computer games at work?
- Woman:** I bet people are also wondering if we have table football and giant slides in the office – computer companies do have a reputation for that kind of thing, and places like that do exist. Gaming certainly goes on in my office, though not all day, every day. It allows you to see possibilities – different ways of tackling issues you're having, as well as enabling you to keep an eye on what your competitors are doing.
- Man:** I've heard something called the design document is important in your work.
- Woman:** Yes, it's a guide for everyone working on developing a game. It details the core themes, features and ideas of the game. Preparing and maintaining it as the project progresses is something the designer has to do. If you're working with other people, you really don't want any misunderstandings, because they can lead to all sorts of annoying issues that take ages to resolve. And even if you're working alone, you have to note things down to keep you focused on your goals.
- Man:** So, what do you think is the real value of gaming for the people who play?
- Woman:** Another interesting question. We're now familiar with the idea that you can get to know people from all over the world through gaming. I'm not saying that's not cool. You could do it in other ways, though – by travelling, for example. Then again, travel doesn't give you the chance to walk, virtually, in another person's shoes. A game can. It enables you to see through another person's eyes to an extent that even a book can't match.
- Man:** OK, one last question, Clara. What changes would you like to see in your industry over the next few years?
- Woman:** Well, I used to get tired of telling people that games aren't a complete waste of time, and they're coming round to that now. Games are already useful in teaching people a range of things; all sorts of skills that can be applied elsewhere. I guess the thing that still bothers me is that the really big games are the ones that centre around conflict and fighting. But there are some great games out there that encourage quite the opposite behaviour – joint problem-solving, for example. If only people knew about them, it'd really make a difference.
- Man:** Thank you, Clara.

*Now you'll hear Part Four again.*

*That's the end of Part Four.*

*There will now be a pause of five minutes for you to copy your answers onto the separate answer sheet. Be sure to follow the numbering of all the questions. I'll remind you when there's one minute left, so that you are sure to finish in time.*

*You have one more minute left.*

*That's the end of the test.*
