

Test 1

READING AND USE OF ENGLISH (1 hour 15 minutes)

Part 1

Questions 1–8

For each question, choose the correct answer.
Mark your answers on the **separate answer sheet**.

Save money – shop less

Few people can resist a nice bargain when they're shopping. However, there are at least two good reasons to do so. **1** back from buying will not only save you money, but also **2** you from filling your home with stuff you don't need. Wanting to **3** advantage of a special offer is natural, but if your purchase is then **4** used, it's worth considering whether you would have bought it at **5** price. Something is only a good deal if you're going to get use or enjoyment out of it on a regular basis.

One way to **6** down on excessive shopping is to try to use a shopping list. It'll make you feel less tempted to waste money on items you had no **7** of buying originally. Another is to avoid using shopping as a form of entertainment. People often buy stuff to **8** a variety of psychological needs, such as to find relief from boredom or to feel in control.

- | | | | | | | | | |
|---|---|-----------|---|---------|---|----------|---|----------|
| 1 | A | Putting | B | Holding | C | Setting | D | Keeping |
| 2 | A | avoid | B | deny | C | prevent | D | exclude |
| 3 | A | get | B | take | C | have | D | make |
| 4 | A | barely | B | merely | C | slightly | D | narrowly |
| 5 | A | complete | B | whole | C | full | D | total |
| 6 | A | turn | B | cut | C | pull | D | knock |
| 7 | A | intention | B | plan | C | aim | D | purpose |
| 8 | A | provide | B | reach | C | ease | D | fulfil |

Part 2

Questions 9–16

For each question, write the correct answer.
Write **one** word for each gap.
Write your answers **IN CAPITAL LETTERS** on the separate answer sheet.

A way of helping bees

Human life is hugely dependent on pollinators like bees and butterflies. Without these insects that carry pollen from one flower to **9** , many plants would not produce the seeds, grains, leaves and fruit that we need in order to survive. Unfortunately, however, insect populations around the world are under threat and we humans are largely **10** blame. In the UK, for instance, insect numbers are estimated to **11** fallen by over 50% in the last half century as a **12** of habitat loss, pesticide use and climate change.

Various habitat restoration initiatives have recently been developed, one of which is the creation of mini-gardens on the roofs of bus shelters – the roadside structures **13** passengers wait for buses. These have specially designed roofs planted with wild flowers that attract bees and other pollinators. The rooftop mini-gardens require **14** or no maintenance, and **15** only do they promote biodiversity, but they help, **16** a small way, to keep cities cool. Unsurprisingly, there's quite a buzz around bus stops these days.

Part 3

Questions 17–24

Read the text below. Use the word given in CAPITALS on the right to form a word that fits in the gap.

Write your answers **IN CAPITAL LETTERS** on the separate answer sheet.

Baby talk in humans and dolphins

‘Baby talk’ is a special form of communication that is observed in almost all human cultures. When talking to babies, adult humans **17** talk in a simplified way, and in a higher-pitched voice than usual. The exact purpose of this ‘baby talk’ is **18**, but it is believed to help carers and babies feel more **19** connected, as the higher-pitched sounds are closer to the ones a baby makes. This interaction may make it easier for the baby to learn to produce the sounds it is hearing.

Marine **20** have now discovered that bottlenose dolphin mothers exhibit similar **21** with their young. During various **22** of dolphin mothers over a number of years, it was found that the whistling sounds they make with their babies are noticeably higher-pitched than at other times. Although **23** evidence is needed, it is thought that there are **24** between the way baby dolphins and baby humans learn to communicate. Studying how animals communicate with their young could ultimately provide insights into human language learning.

 - 24 SIMILAR

Part 4

Questions 25–30

For each question, complete the second sentence so that it means the same as the first, using the word given. **Do not change the word given.** You must use between **two** and **five** words, including the word given.
Write **only** the missing words **IN CAPITAL LETTERS** on the separate answer sheet.

25 I regret not buying that beautiful jacket when I saw it.

WISH

I that beautiful jacket when I saw it.

26 The meeting lasted longer than expected.

GO

It was not expected that the meeting long.

27 I can't wait to introduce you to my best friend.

FORWARD

I'm really you to my best friend.

28 'Are you still hungry?' asked Mum.

ANYTHING

'Would to eat?' asked Mum.

29 It was impossible for Steph to reach the apples in the tree without a ladder.

TALL

Steph to reach the apples in the tree without a ladder.

30 Before Jane went scuba diving, she had to prove how well she could swim.

GOOD

Before Jane went scuba diving, she had to prove how swimming.

Part 5

Questions 31–36

Read a magazine article about a fashion designer. For each question, choose the correct answer. Mark your answers **on the separate answer sheet**.

A fashion designer

Like many young environmentally aware fashion designers, Reet Aus was curious as to where the material typically used to make clothes came from, but uncovering the truth turned out to be a challenging task. Unlike many of her contemporaries, Reet decided to pursue the matter and went on a journey – literally. As well as delving into research papers, she travelled the world, from cotton fields in Peru to textile factories in Bangladesh.

What she discovered was concerning. Vast quantities of fabric that are surplus to factory requirements are sent to rubbish dumps or simply burnt. What's more, contrary to what we might like to believe, most clothes themselves soon suffer the same fate. Meanwhile, the increasing use of chemicals and microplastics in clothes also makes them increasingly hard to recycle. It all adds to a huge waste problem. But where some might despair, Reet spotted an opportunity: to take some of that waste, treat it as raw material, and turn it into clothes.

It was an idea seized upon by one of the manufacturers Reet investigated during her research – one of Bangladesh's largest textile businesses. When she turned up with her team to ask for permission to film the manufacturing process, the managing director not only agreed – but suggested they go into business together. If she could find a way of designing clothes out of the company's offcuts, he reasoned, then the problem of how to dispose of them could become a money-making resource. For a while, she recalls, 'Bangladesh became my second home,' as she got to know the production process intimately, working with her new colleagues to create a whole new line of clothing. She's since set up similar deals with factories in other countries.

In her studio in Tallinn in Estonia, Reet shows me how each resulting 'upcycled' garment is made out of a patchwork of individual pieces

of cloth – sometimes up to 50 in a single item. 'That means a lot of seams, but those only serve to make it stronger,' she explains. 'I don't set out to make a shirt or to make trousers,' she adds, but instead she looks at the material and thinks: 'What can I make with it?' Using fabrics directly in the factory also means she can guarantee her garments don't contain the toxins or other pollutants that are often added in other factories where clothes are mass-produced. And, by definition, each product is unique.

Unsurprisingly, Reet's product range isn't among the most affordable. T-shirts come in at around €50; dresses at €80. But, as she puts it: 'To be honest, we don't go along with the notion of throwaway fashion. To create a stylish and durable garment takes resources, and we know that young consumers want people involved at every stage of the manufacturing process to be paid fairly and have a safe working environment. That all adds up in the price tag.' Pointing out that consumption of clothes has increased by 400% over the last 20 years, Reet argues that by buying fewer, more sustainable clothes, and looking after them better, we might end up spending less overall – while cutting the environmental cost.

For now, though, persuading major brands to take on her 'upcycling' approach remains an unfulfilled goal. Initially promising conversations with various brands are yet to bear fruit. But Reet isn't deterred. 'Big, new ideas move slowly down corporate corridors,' she concludes. Instead, working with the Stockholm Environment Institute, she's focused on developing a new 'upmade' certification, setting standards for the approach she's pioneered, allowing others who meet them to label their clothes as such. In time, this might encourage major players to join the party. Meanwhile, Reet is content, as she puts it, 'to give new life to old material by design'.

- 31 In the first paragraph, we learn that Reet Aus differs from most other young fashion designers because she**
- A** made a point of visiting all the companies she'd made initial contact with.
 - B** decided to source fabrics from a particularly wide range of places.
 - C** made a considerable effort to gather information about fabrics.
 - D** had the right skills to investigate how fabrics were produced.
- 32 In the second paragraph, the writer describes how Reet**
- A** tried to convince companies only to use natural materials.
 - B** realised that her industry was contributing to a wider problem.
 - C** considered giving up her career for environmental reasons.
 - D** was upset to discover what happens to the clothes she designs.
- 33 When they first met, Reet's business partner in Bangladesh suggested that she should**
- A** make a video showing her customers how his fabrics were made.
 - B** only make clothes using fabrics that were supplied by his factory.
 - C** design clothes made out of otherwise unusable pieces of fabric.
 - D** work together with his employees to develop their design skills.
- 34 In the fourth paragraph, Reet describes how she**
- A** orders the fabrics to be used in each of her designs.
 - B** ensures that her clothes will all be of equal quality.
 - C** gets ideas for each item of clothing she makes.
 - D** chooses fabrics known to be long-lasting.
- 35 Reet suggests that the price of the clothes she produces**
- A** is part of a general trend in the market for fashion items.
 - B** reflects what her typical customers are willing to pay for them.
 - C** could eventually fall if more companies adopted her principles.
 - D** needs to be seen in the wider context of people's attitudes to clothes.
- 36 In the text as a whole, the writer suggests that Reet Aus is somebody who**
- A** maintains a positive attitude despite problems in her area of work.
 - B** would be happier in another industry.
 - C** is willing to listen to people with very different views to her own.
 - D** appreciates the need to remain focused on the needs of her clients.

Part 6

Questions 37–42

Read a magazine article about a scientist who acted as a parent for some wild turkeys. Six sentences have been removed from the text below. For each question, choose the correct answer. There is one extra sentence which you do not need to use.
Mark your answers on the separate answer sheet.

Being a ‘mother’ to wild turkeys

While studying animal behaviour at university, I learnt of a process known as imprinting, whereby young creatures become attached to the first moving object they encounter. It wasn’t until many years later that I got the chance to explore this phenomenon further. I was living in rural USA, working as a wildlife artist and researcher. One day, I was given a bowl full of wild turkey eggs by a tractor driver who’d almost driven over them.

I had to act fast, getting an incubator to keep the eggs warm and turning them twice a day, as a turkey hen would. I also regularly recreated the sounds a wild turkey would make on its nest. **37** A week or so later, I started to hear responses, and soon the first tiny beak broke through a shell. The first baby turkey, or poult, to emerge responded immediately to hearing me, looking me straight in the eyes. Then he pressed his head against me and quickly fell asleep. Over the next few days, this process was repeated many times; I soon had a new family of 16 wild turkeys.

I created a large pen, a fenced area to protect my flock from predators, complete with small trees for them to rest in, since at a week and a half old, they could already fly. I spent a lot of time there myself, even when they were sleeping. **38** I also had to be present when it was coming to an end, until each of my charges was asleep again.

During the day, we explored the surrounding countryside. I quickly became familiar with each bird’s distinctive personality: Little Friend, who

always wanted to be by my side; Sweet Pea, who enjoyed nothing better than being held and stroked. **39** Rosita was drawn to squirrels, for example, and Turkey Boy to turtles.

Wild turkeys are born with an extensive language. A wildlife biologist called Lovett Williams identified and recorded about 30 calls. **40** I could even give a ‘lost’ call that other members of the family would respond to, revealing their location, or an ‘assembly’ call that would bring the whole flock dashing and flapping back to me.

Through spending time with the turkeys, however, I discovered their communication was far subtler than I’d realised. We encountered many snakes as we explored, and I was soon able to distinguish the different inflections the young birds made to identify various species. Over time, I got better at making those sounds myself, adjusting my voice to reproduce them as precisely as I could. **41** I then felt quite embarrassed at how I must appear to them.

The project lasted two years. The turkeys grew fast, but my separation from them began when they started roosting overnight in trees outside their pen, where I couldn’t follow. I felt relief at having kept them alive long enough to become independent, but I missed them, too. Eventually, they all struck out on their own. **42** However, I had no direct contact with the next generation of wild turkeys. I’d entered their world, but then I had to learn to let go.

- A** They were fascinated by every new thing they encountered, but also had individual interests.
- B** As a result, I knew exactly how to respond to them when they did it.
- C** Sometimes, though, I'd miscall and get a very different reaction from the one I'd anticipated.
- D** This helped to make my voice become familiar.
- E** Individuals would occasionally visit me after that.
- F** Having studied this research, I was well aware of those sounds and their meanings.
- G** That was because they'd expect to see their 'mother' when they emerged to start the day.

Part 7

Questions 43–52

Read an article about the sport of rock climbing. For each question, choose the correct section. Each section may be chosen more than once.
Mark your answers on the separate answer sheet.

My first attempt at rock climbing

A

Hanging onto a vertical rock face by my fingernails was not, I admit, my idea of a good day out. Fans of rock climbing say it helps with your self-confidence, as well as improving your balance and upper-body strength. But on the train to Llandudno, north Wales, where I would try the sport for the first time, all I could think of was the fall in the film *Touching the Void*. That, and the fact that the risk-assessment form I had to sign in advance put the likelihood of breaking a limb at 'medium'. Still, ever more people are turning to rock climbing as a leisure activity. And while indoor rock climbing has seen a larger uptake, a 2010 survey found that three quarters of regular climbers prefer to do so in the great outdoors. If more reassurance were needed, my teacher for the day is Nigel Shepherd, who has been climbing for almost five decades.

B

As we drive from Llandudno to the Great Orme, one of the UK's top spots for sport climbing – in which climbers attach their ropes to permanent anchors in the rock, as opposed to traditional climbing, where they insert and remove hooks as they go – Shepherd explains the activity's appeal. 'It can be brutal; it can be elegant. Working out how you're going to get up the rock can be a phenomenal challenge and a puzzle,' he says. 'When you combine that with going to beautiful places and being outside all day, you can see why I've made it my life.' He also understands why many are reluctant to give the sport a go. The most common reasons are people being scared of heights, worrying about whether their arms are strong enough and feeling they are too clumsy. 'The main

skills you need to be a great climber are a cool head, strength, agility and balance. But if you don't have them naturally, you might find they come after a few sessions.'

C

We pull up at a spot where the limestone rocks of the Great Orme drop down, broken by levels of grass and mud, into the sea. The sun is out and we can see over Conwy Bay to the village of Penmaenmawr, where Shepherd lives with his wife and three children – all of whom are serious climbers. After a few minutes for me to get used to walking in the thin-soled climbing shoes he has supplied, Shepherd races up a wall, looping the rope I will climb on through the anchors which are already in place. At first there are clear footholds and deep 'jug holds' for the hands. Then it becomes harder to get a hold. Shepherd suggests putting more weight onto the balls of my feet rather than trying to haul myself up with my arms. This sounds straightforward, but is easier said than done on a steep wall.

D

I'm suffering from a weak ankle, but by the time I reach the top of the limestone section I'm starting to understand the satisfaction of completing a climb, however small. I wait until the drive back to the station before asking whether Shepherd himself has had any close shaves. He tells me of a time in Greenland a few years ago, when a support came loose and he dropped almost 20 metres on a rope. Shepherd is as fit and flexible as you would expect of a full-time climber, but are there any plans to slow down, considering he celebrates his 60th birthday next year? 'I'm not planning to hang up my helmet any time soon,' he says.

In which section does the writer mention

a desire not to give up the sport?	43
seeing climbing as a kind of problem that can be solved?	44
something being more difficult than it might seem?	45
a growth in his appreciation of the pleasure of climbing?	46
thinking about the possibility of being injured?	47
an experience of serious danger?	48
feeling fortunate to be in the hands of an expert?	49
details of the view in front of him?	50
what are said to be some of the benefits of the sport?	51
alternative methods of tackling a climb?	52

Test 1

WRITING (1 hour 20 minutes)

Part 1

Question 1

You **must** answer this question.
Write your answer in **140–190 words** in an appropriate style on the separate answer sheet.

- 1 In your English class you have been talking about making decisions. Now, your English teacher has asked you to write an essay.
- Write your essay using all the notes and giving reasons for your point of view.

'It is better to make decisions really quickly than to think carefully before making them.' What do you think?

Notes

Write about:

- choosing a career
- buying things
- (your own idea)

Part 2

Questions 2–4

Write an answer to **one** of the questions in this part.
Write your answer in **140–190 words** in an appropriate style on the separate answer sheet.
Put the question number in the box at the top of the answer sheet.

2 You see this notice on a local tourism website:

Local history tour guide wanted

We are looking for a guide to show groups of English-speaking visitors around our local historical sites.

You must have:

- an interest in local history
- an ability to deal with different kinds of people
- a good level of spoken English.

Write to Monika Zablinsky, Tourism Director, explaining why you would be suitable.

Write your **letter of application**. You do not need to include a postal address.

3 You recently went on a five-day photography course at an international college. Now, the college principal has asked you to write a report about your experience of the course.

In your report, you should:

- explain why you went on the photography course
- say which parts of the course you enjoyed, and why
- suggest how the course could be improved.

Write your **report**.

4 You see this announcement on an English-language website:

Articles wanted

A pleasant surprise!

Has anything really good ever happened to you that you didn't expect?
What happened, and what effect did it have on you?

The best articles will be posted on our website.

Write your **article**.

Test 1

LISTENING (approximately 40 minutes)

Part 1

Questions 1–8

For each question, choose the correct answer.

- 1 You hear a woman talking about a podcast on current social issues.**

What does she suggest is a problem with the podcast?

 - A** the length of the discussions in it
 - B** the range of topics it covers
 - C** the type of guests it features
- 2 You hear a man being interviewed about how he became a product designer.**

What does he say about going into this profession?

 - A** It allowed him to combine several interests.
 - B** Being very determined was important.
 - C** His previous contacts helped him.
- 3 You hear a woman talking about an exhibition she saw in a museum in England.**

What surprised her about the objects in the exhibition?

 - A** how well preserved they were
 - B** how emotional they made her feel
 - C** how little is known about their functions
- 4 You hear two friends talking about a new shopping centre that is under construction.**

They disagree about the impact the shopping centre will have on

 - A** the quality of life in the city.
 - B** the amount of traffic in the city.
 - C** the economic development of the city.

- 5 You hear part of an interview with a writer, who is talking about a place she visited.**
Why did the landscape there appeal to her so much?
- A** It had probably remained unchanged for centuries.
 - B** It brought back fond memories of her childhood.
 - C** It offered extensive and uninterrupted views.
- 6 You hear a woman telling a friend about an article she has read on tiger habitats.**
What does she say about the article?
- A** It lacks detail in one aspect.
 - B** The ideas it discusses may be too ambitious.
 - C** It fails to explain recent progress clearly.
- 7 You hear a woman talking to a friend about what to wear for a job interview.**
What do they disagree about?
- A** how important it is to wear smart clothes
 - B** how effective it is to wear dark colours
 - C** how wise it is to wear eye-catching jewellery
- 8 You hear two trainee electrical engineers talking about their work.**
What aspect of their job inspires them both?
- A** the opportunity to help others
 - B** the prospect of future promotion
 - C** the chance to deal with complex technologies

Part 2

Questions 9–18

You will hear a woman called Jane Megson talking about her first experience of taking part in a triathlon, a race involving swimming, cycling and running. For each question, write the correct answer. Write a word or short phrase.

Listening test audio

My first triathlon

Before training for the race, Jane had never run more than **9** in one go.

Jane ate too many **10** early on in her training.

Jane says a **11** was where she trained hardest.

The only bit of gear Jane bought for the triathlon was a **12** for cycling.

Jane remembers having a great sense of **13** at the start of the race.

During the second stage, Jane realised there was something wrong with one of the **14** on her bike.

Towards the end of the cycling stage, Jane was surprised at how **15** she felt.

Soon after starting the third stage, Jane became aware of an old problem with her **16** coming back.

During the third stage, Jane was impressed by the amount of **17** she noticed among competitors.

Jane was disappointed with the quality of the **18** she received after finishing the race.

Part 3

Questions 19–23

You will hear five short extracts in which people are talking about documentary films they have recently watched. What impressed each speaker most about the documentary they watched?
For each question, choose the correct answer.
Use each answer only once. There are three extra answers which you do not need to use.

Listening test audio

- Speaker 1 **19**

Speaker 2 **20**

Speaker 3 **21**

Speaker 4 **22**

Speaker 5 **23**
- A** the quality of the camerawork

B the amount of work that went into making it

C the positive message that came out of it

D the new understanding it provided of a particular subject

E the humour it contained

F the emotional impact it had

G the way certain people in it expressed themselves

H the clear explanations of some complex ideas

Part 4

Questions 24–30

You will hear an interview with Emma Johnson, a wildlife filmmaker, about filming some birds of prey called goshawks. For each question, choose the correct answer.

- 24 Emma began to think about filming goshawks when she
- A came across some on a guided nature walk.
 - B learnt about their endangered status.
 - C agreed to help with some research about them.
- 25 After Emma had decided to film the goshawks, she
- A initially had difficulty locating them.
 - B worked out how to keep a written record of her sightings.
 - C obtained special permission to enter some woodland.
- 26 Once she'd started work on filming close to home, Emma
- A wondered why she hadn't attempted it before.
 - B felt ashamed about an assumption she'd made.
 - C thought it might change her attitude to future projects.
- 27 What particularly impressed Emma about the ancient woodland she filmed in?
- A Nature had rapidly reclaimed areas abandoned by humans.
 - B The animal species there had changed over the centuries.
 - C Many creatures' homes were undisturbed, despite development.
- 28 How did Emma feel about the arrangements for filming the goshawks?
- A nervous about having to be high up off the ground
 - B concerned about operating equipment in a cramped space
 - C regretful about the absence of her usual camera crew

29 Through listening to bird calls in the woodland, Emma learnt

- A** what the goshawks' calls to each other sounded like.
- B** which species favoured certain types of tree.
- C** when particular birds were warning of an enemy close by.

30 Emma hopes that with the release of her film, more people will

- A** be keen to learn about rare wild birds.
- B** realise that wild birds should be left in peace.
- C** volunteer to record sightings of wild birds.
